Pseudomonas aeruginosa

18l/h

Smittspårning

Två patienter med hematologisk malignitet avled i sepsis orsakad av en metallo-betalactamas (MBL) producerande stam *Pseudomonas aeruginosa*.

Bakterien resistent mot de flesta antibiotika

Patienterna hade vårdats på samma avdelning, i samma rum.

Samma bakterie i tvättstället

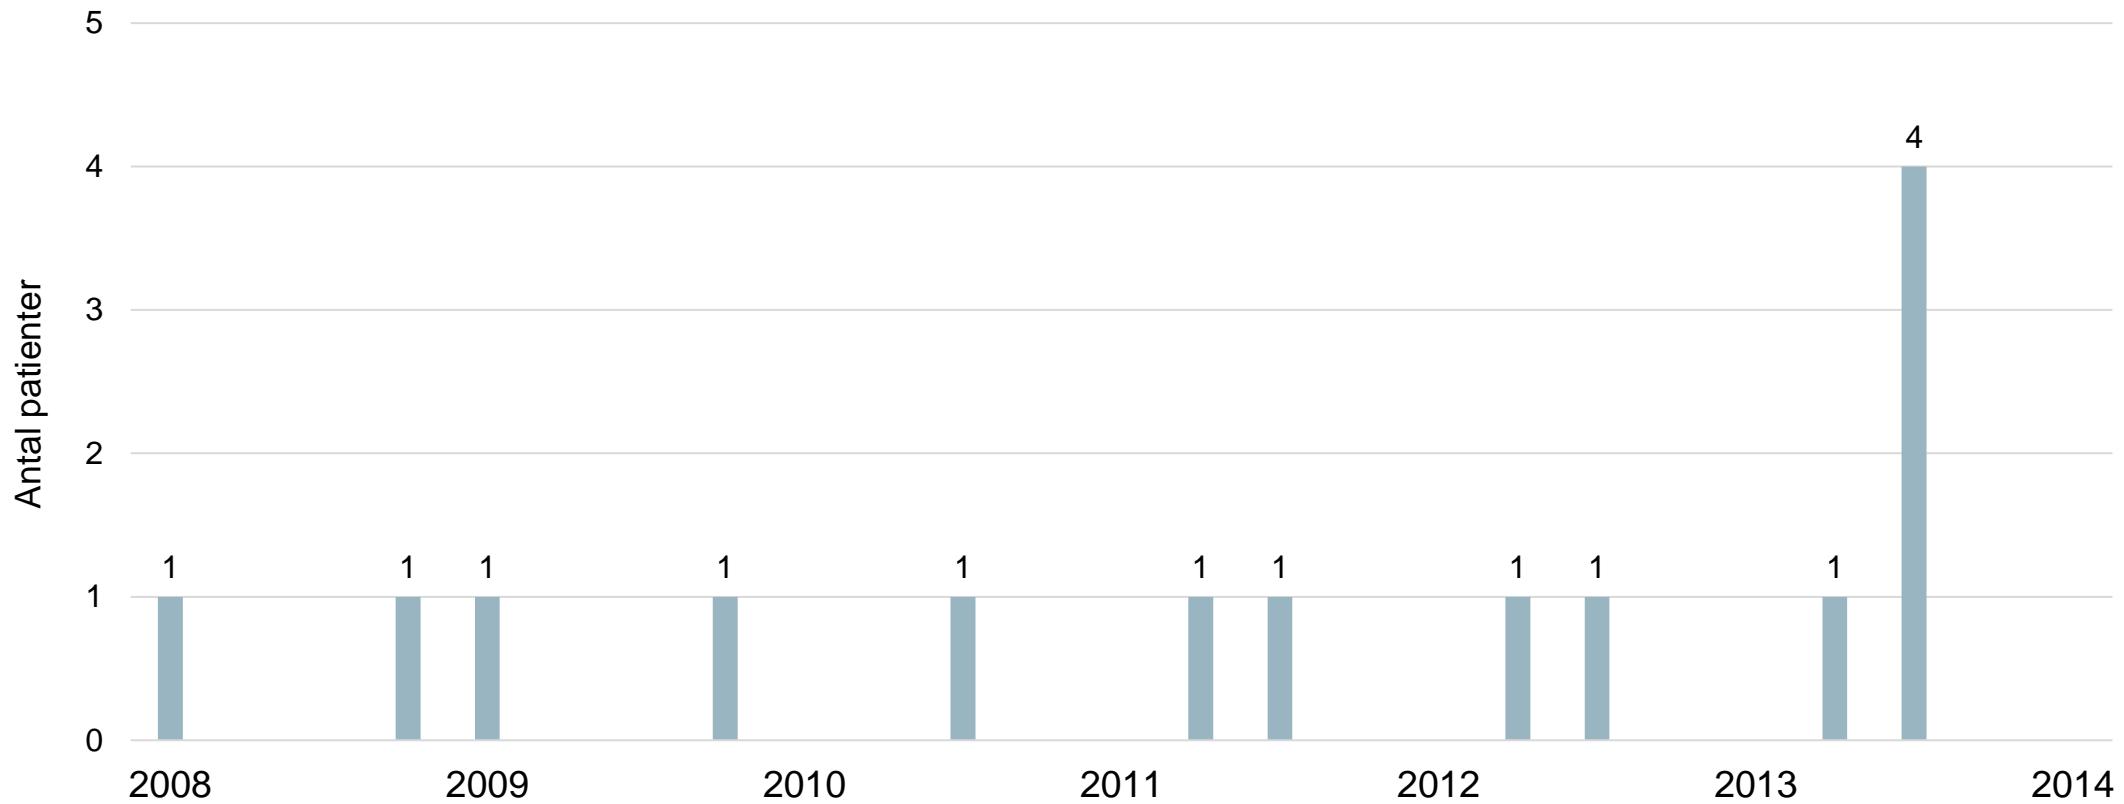

Antibiotics	
Piperacillin-tazobactam	R
Ceftazidim	R
Imipenem	R
Meropenem	R
Aztreonam	R
Colistin	S
Gentamicin	S
Tobramycin	R
Ciprofloxacin	R

Sjukhusvättställ

- Bakteriereservoir
- Biofilm
- Utbrott beskrivna
- Stänker – sprider bakterier
- Utformning

Patienter med MBL producerande *Pseudomonas aeruginosa* i Lund 2008-2014

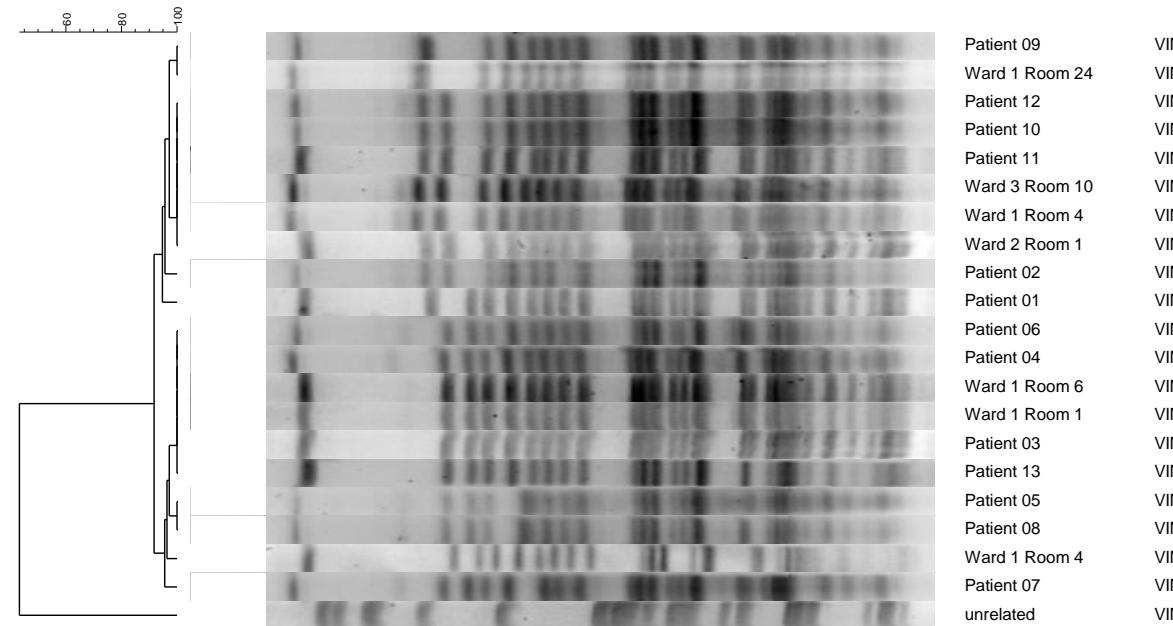

Pat. no.	Comorbidities	First positive culture/ site of detection	Ward 1	Ward 2	Ward 3	Occupied a room with Pae-MBL in the sink drain
1	Chronic ulcer	Aug. 2008 ulcer	x			NA
2		Odlade alla tvättställ på avd 1,2,3 (+4 kontrollavd)	x			yes
3	Ventil	Bakterien hittades i totalt 11 tvättställ. Alla på patienttoaletten				NA
4	COPD	Dec. 2009, sputum	x			NA
5	UTI pneumonia	Aug. 2011 urine	x			NA
6	Hematological malignancy	Underliggande diagnoser: <ul style="list-style-type: none">• 3 hematologisk malignitet• 7 lungsjuka• 2 sår		x		NA
7		Lokal för positiv odling: <ul style="list-style-type: none">• 3 blododling• 6 luftvägsprov• 2 sår• 1 urin	x	x	x	yes
8	COPD		x			yes
9	Haematological malignancy, neutropenia	July 2013, blood		x		yes
10	Haematological malignancy, neutropenia	July 2013, blood		x		yes
11	Necrotizing fasciitis	July 2013, wound	x		x	yes
12	COPD	Aug. 2013, sputum	x	x	x	yes

Molekylär typning med PFGE visade samma stam

12 patienter

7 handfat

Pulsfältgelektrofores (PFGE)

Åtgärder

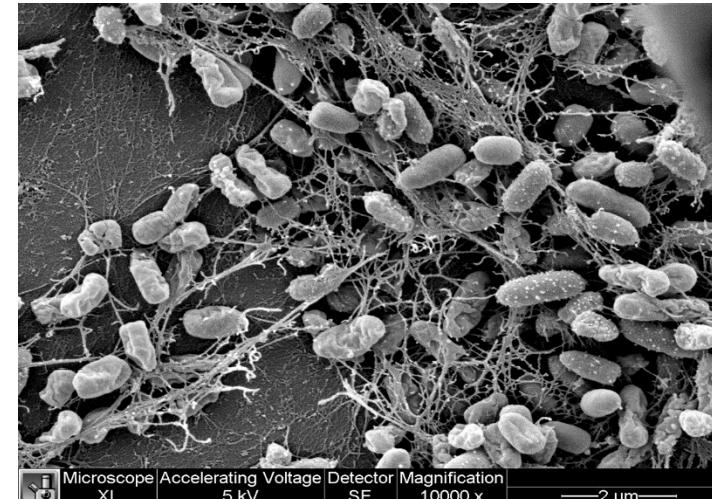

Ättika och MBL producerande *Pseudomonas aeruginosa*

Intervention

2,5 deciliter 24% ättika en gång i veckan

Negativa övervakningsodlingar under behandling med ättika sedan hösten 2013.

	Acetic acid %
MIC	0.047
MBC	0.19
MBEC (12 h)	0.75

Ayliffe, G. A., et al. (1974). "Pseudomonas aeruginosa in hospital sinks." Lancet **2**(7880): 578-581.

kill other gram-negative bacilli in the trap. A simpler solution to the problem would be to ensure that the water from the tap is not directed at the sink outlet, that plugs are never used during handwashing, and that the plumbing near to the sink is occasionally cleaned and replaced when faulty. Overflows could be excluded from basins; washbasins should also be regularly cleaned and not used for disposal of contaminated washing or cleaning water.

Utbrottsbeskrivningar

MDR gramnegativa
Ffa IVA, neonatal, hematologi

Interventioner

- Byt tvättställ/avlopp
- Självsteriliseraende vattenlås
- Desinfektionsmedel
- Stänkfria silhål
- Ättika

Acetic acid as a decontamination method for ICU sink drains colonized by carbapenemase-producing Enterobacteriaceae and its effect on CPE infections

RESEARCH

Open Access

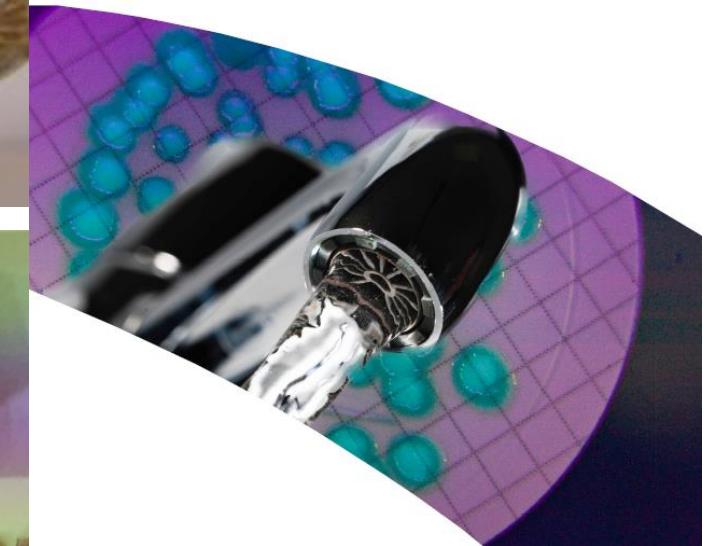

Reduced rate of intensive care unit acquired gram-negative bacilli after removal of sinks and introduction of 'water-free' patient care

Joost Hopman^{1†}, Alma Tostmann^{1†}, Heiman Wertheim¹, Maria Bos¹, Eva Kolwijk¹, Reinier Akkermans³,
Patrick Sturm^{1,4}, Andreas Voss^{1,2}, Peter Pickkers⁵ and Hans vd Hoeven⁵

Invatten – biofilm, bakterier

Water systems
Health Technical Memorandum
04-01: Addendum

Pseudomonas aeruginosa – advice for augmented care units

Kontamination

Ökar om:

- Personal och patienter använder samma tvättställ
- Närings tillförs – typ allt som inte är vatten
- Felaktig städning
- Felaktig design

Hur stort problem egentligen?
