

AMOSoft

Do you operate in a business where cables are used in, for example, switchgear, substations, or technical rooms? Are there requirements for halogen-free and chemical resistance? Do you consider flexibility to be an important cable property during installation?

We have the cable for you! - AMOSoft

 amokabel

Made in Sweden

AMOSoft 0,6/1kV

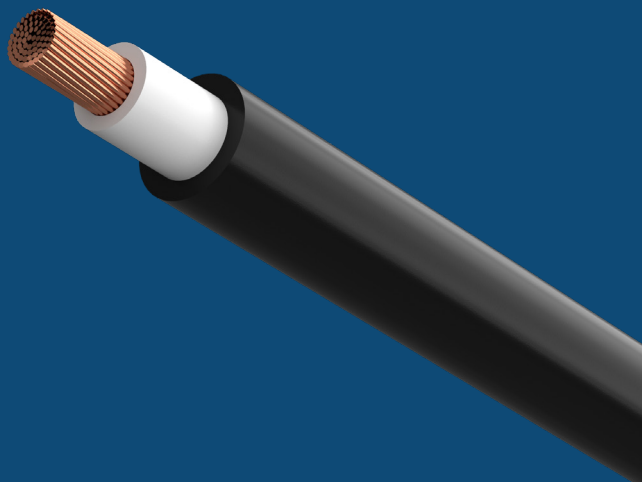

AMOSoft is an exceptionally flexible and double-insulated connecting cable.

The product is specifically designed for installations where extreme flexibility is an essential feature. The insulation material can withstand a conductor temperature of up to 90°C, and the flame-retardant sheath gives AMOSoft a smooth, strong, and rubber-like surface with high chemical resistance.

The cable can be used for various applications, such as battery connections and short-circuit-proof installations, including distribution panels, technical rooms, and connecting equipment.

AMOSoft, with its rare flexibility, is one of the easiest products to work with on the market. The product has been highly valued by installers worldwide for several years.

AMOSoft is manufactured in Sweden.

A modern world demands a modern industry that works for continuous development and new solutions. We offer standardized cables as well as custom cables according to customer preferences and specifications. Innovation permeates our entire operation, and often we design and construct the product in collaboration with the customer to ensure the right product for the right application. We work with a wide range of materials and can provide solutions across multiple segments, with short delivery times.
