WE ARE SERVING THE INDUSTRY WITH

TEXLine

PROBABLY THE BEST MARINE CABLE IN THE WORLD

WE ARE A LEADING

MANUFACTURER

OF CABLE AND CONDUCTORS

amokabel is a Scandinavian group of companies producing different types of conductors, cables and consumer packed products. We are leading in our branch of business when it comes to flexibility in the production and short lead times. Focusing on high quality and minimal impact on the environment, we are always working on new innovations and developing new products.

We have been manufacturing cable in Alstermo since 1996. Since then, the plant has been expanded several times in order to meet the increased demand for our products. The factory area is today 27 500m².

SUSTAINABLE DEVELOPMENT

amokabel is self-sufficient on energy, produced from 100% renewable sources. In addition, we are certified according to ISO 14001.

HIGH LEVEL OF QUALITY

High quality is one of the leading principles for **amokabel**, guiding us in every process from production to after sales services. We are also certified according to ISO 9001.

FLEXIBILITY IN PRODUCTION AND DELIVERY

amokabel believes in a flexible organization, which enables us to customize our products and provide short leadtimes.

INNOVATIONS

amokabel is driven by technical innovations, and has developed more than 4500 unique constructions.

HIGH CUSTOMER FOCUS

amokabel works together with the customer in order to provide the best suitable solution.

CORPORATE SOCIAL RESPONSIBILITY

amokabel continually strive to develop the local region. In addition to direct financial support to organizations in the local area. We have been involved in and contributed to major initiatives that have benefited the population in Alstermo and the vicinity.

WE PRODUCE

DNV APPROVED

MARINE CABLE

In 1998, **amokabel** began developing the TEXLine series. At that time there were mainly PVC insulated wires in the market which had limitations in temperature range. With a lot of requests from customers we understood there was a great need for a specially designed wire for use in the marine and offshore industry. The first product introduced was the TEXLine HF90, a halogen free single insulated flexible wire for use in switchboards and panels.

Since then several new wires and cables have been developed and added to the TEXLine series. With our close relations to the end-users, we have designed products that fully meet the requirements for a secure and lasting connection under the harsh conditions that may occur in installations in ships.

As one of few suppliers in the market, **amokabel** offers a wide range of DNV-approved cables for the marine and offshore industry.

TEXLine TW 150/250V

Thin wall insulated wire for use in switchboards and panels with voltage 150/250V. TEXLine TW has a decreased outer diameter and a flexible tinned copper conductor which makes it easier to install in tight spaces. DNV-approved in 0,5mm² and 0,75mm².

TEXLine HF90 0,6/1kV

Single insulated wire for use in switchboards and panels. TEXLine HF90 has a smooth surface and a flexible tinned conductor which gives the wire good installation properties. DNV approved from 0,75 to 240mm².

TEXLine HF90D 0,6/1kV

Double Insulated wire for short circuit installation in switchboards and panels. TEXLine HF90D is extruded with two equally thick layers of insulation to meet the demands that DNV has for this type of installation. DNV approved from 1,5 to 240mm².

TEXLine Signal 150/250V

A complete range of cables for use in communication and signal applications. The range includes cables with all different types of shielding.

TEXLine Signal - No screen.

TEXLine Signal (c) Al-foil - Collective screen of aluminium foil.

TEXLine Signal (i) (c) Al-foil - Individual screened pairs and collective screen of aluminium foil.

TEXLine Signal (c) Cu-braid - Collective screen of copper wire braid.

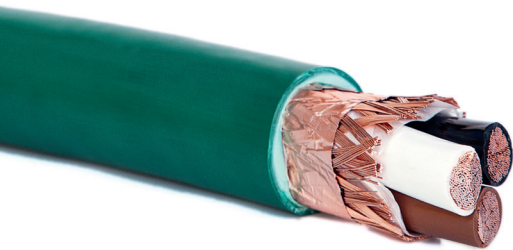

TEXLine Signal (i) (c) Cu-braid - Individual screened pairs and collective screen of copper wire braid.

TEXILine Power 0,6/1kV

Flexible cable for fixed installations indoor and outdoor. TEXILine Power has flexible copper conductor according IEC 60228 class 5 to make the installation as easy as possible under the most challenging situations in marine and offshore applications.

TEXILine Power EMC 0,6/1kV

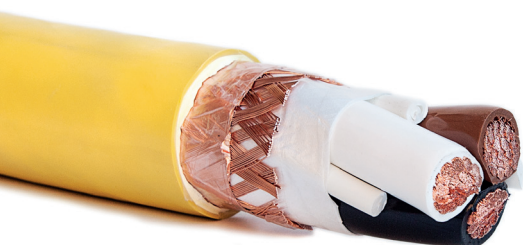

EMC screened flexible cable for fixed installations indoor and outdoor. TEXILine Power EMC has a copper wire braid with a helical copper foil over the braid, which gives the screen 100% covering for EMC protection.

TEXILine Power VFD EMC 1,8/3kV

EMC screened flexible cable for fixed installations for variable frequency drives. The VFD design has increased wall thickness to assure long life time in variable frequency drives installations. Available with symmetrical grounding conductor.

TEXILine Power VFD EMC Soft 1,8/3kV

EMC screened flexible cable specially designed for installations of retractable azimuth thrusters. TEXILine Power VFD EMC Soft is designed to withstand the mechanical stresses which the cable is subjected to in this type of application. The cable has been tested for over 80 000 cycles in a test equipment which simulates an actual installation.

OUR STRENGTH IS

INNOVATION AND FLEXIBILITY

amokabel is a tight organization with minimal administration, our facility has modern machinery and production adapted for quick changes. This enable us to be flexible and provide short lead times.

Availability, efficiency and flexibility are key words in our daily business. Everyone in our organization puts high focus on the customer. Our vision is to have a close cooperation with our customers to understand their needs and to find the best solutions for them.

Satisfied customers is a very important goal of quality for us!
