

Chain series
Product info

HYLLTEKNIK II

Our latest shelf combines design with strength as well as material selection with function. The bracket is made out of solid wood available in either birch or oak. The brackets are carefully tested so that the product becomes strong and in accordance with Hyllteknik's requirements. The shape of the bracket not only fills a design purpose but also a function when the shelf ends are hugged over the consoles and form fit. The add-on section makes this shelf series really innovative. The ends are cut out to form a chain-shaped connection to the next shelf, which has also been named the "Chain" product. A stopper on the front edge of the console then prevents the shelves from leaving their position.
