From GMV

A worn-out lift?  
No lift?  
No room for a lift?

We have the solution,  
opening your block  
to everyone.

Market leader  
with more than 850,000 lifts  
worldwide using GMV technology

**GMV**  
We Know How

Screw lift or  
chain lift.  
Worn-out.  
Small space.

Old screw lifts and chain lifts are often worn and shabby, requiring a lot of costly maintenance. They rattle, operate slowly and have narrow doors, stopping walking frames and wheel chairs.

We have a “Proper Lift”  
needing only  
a small space.

Our patent pending lift model BIG SPACE is specially developed to meet the needs of replacing existing lifts in old blocks and it is constructed to find room in limited lift shafts. While being small enough, BIG SPACE is also spacious on the inside and its doors are easily welcoming walking frames as well as wheel chairs. To make the installation quick and easy, the system can be tailored to meet every different need and to fit every narrow shaft.

Advantage of  
exchanging to  
BIG SPACE

- Speed increases from 0,3 m/s to 0,63 m/s.
- Rated load can be increased from 325 to 700 kg.
- Traveling comfort will be enhanced and the running more silent.
- Car doors will provide improved safety.
- The system enables to keep parts of existing materials.

No lift.

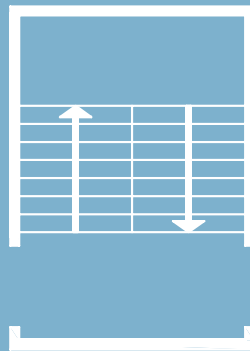

No room for a lift. . .

We have the lift you will  
find room for!

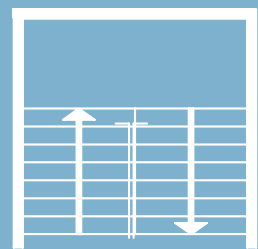

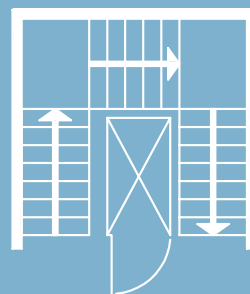

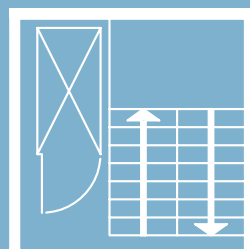

BIG SPACE from GMV is not large – on the outside. But by using every inch of the lift shaft it allows big space (!) on the inside.

Our large little lift needs only a limited space for its shaft. By re-making the stairs to a narrower model, BIG SPACE can easily be placed in the existing stairwell.

Should the staircase already be narrow, an external lift shaft could be the solution. Our large lift being so small, the extension can be made discreet and proportionate.

We Know How

GMV Sweden AB Forsdalavägen 1 342 32 Alvesta, Sweden 0472 - 456 00  
[www.gmv.se](http://www.gmv.se)

---

GMV Sweden is located in Alvesta in the south-Swedish landscape of Småland,  
renowned for its strength in enterprising.

In these parts, we have developed and produced lift components  
for more than 40 years  
and here we use all our experience and knowledge in today's production,  
test runs and support.

From here we are steadily aiming forwards to meet market development  
and our customers' needs.

We started as DEVE lifts,  
since 1993 we are part of GMV Group.  
Our annual turnover is today around SEK 100 million.
