Agenda

01 Introduction

02 Overview of SAP Cloud ALM

03 AI Capabilities Cloud ALM

04 Transition from SAP Solution Manager to SAP Cloud ALM

When **Challenges** become **Mission-Critical Issues**

Implementation Challenges

Poor Planning

No Best Practices

Scope Change

Lack of Visibility

Disconnected Systems & Processes

Operation Challenges

Limited Alerts

No Event Calendar

Limited Collaboration

Reactive Monitoring

Mission Critical Issues

Why should you consider SAP Cloud ALM, today ?

Implementation & Operations
for RISE with SAP customers

Clean core, **RISE with SAP
Dashboard** &
Integrated toolchain

90+ SAP Solutions Supported
(Cloud ERP, Successfactors,
Datasphere, Concur, etc..)

Observability platform for SAP
BTP and Non SAP Applications

SAP Solution Manager end of
Main stream Maintenance
Dec 2027

Business AI & much more..

Hot News: Effective January 21, 2026, the base memory size of all SAP Cloud ALM tenants has been increased from 8GB to 24GB.

Learn more about this change by reading [this blog post](#).

SAP Cloud ALM Usage Rights Scope

- Usage rights are included in SAP Cloud Service subscriptions containing Enterprise Support, cloud editions, in SAP Enterprise Support and in Product Support for Large Enterprises.
- SAP Cloud ALM may only be used for application lifecycle management of the customer's on-premise SAP solutions insofar as these solutions are covered by customer's SAP Support agreement.
- SAP Cloud ALM may only be used for the customer's own internal ALM processes.
- SAP Cloud ALM includes a baseline of 24 GB SAP HANA Memory.
- SAP Cloud ALM includes a baseline of 24 GB monthly outbound API data transfer.
- Test management in SAP Cloud ALM is built to test and validate business processes. SAP Cloud ALM may not be used for automation of productive business processes.

The customer must either hold an SAP Enterprise Support, Product Support for Large Enterprises or an SAP Cloud Subscription contract containing Enterprise Support, cloud edition to have the entitlement to provision one SAP Cloud ALM tenant.

What is SAP Cloud ALM?

SAP Cloud ALM provides businesses with a robust and scalable solution for managing their entire solution landscape in the cloud..

Benefits of SAP Cloud ALM

- ✓ Reduce TCO of solution landscape
- ✓ Supports Cloud & Hybrid
- ✓ Instantaneously available
- ✓ Included in subscription

Capabilities of SAP Cloud ALM:

Implementation

Holistic support for implementation and maintenance of all SAP solutions, covering design, build, test and deploy with integrated analytics and traceability

Operations

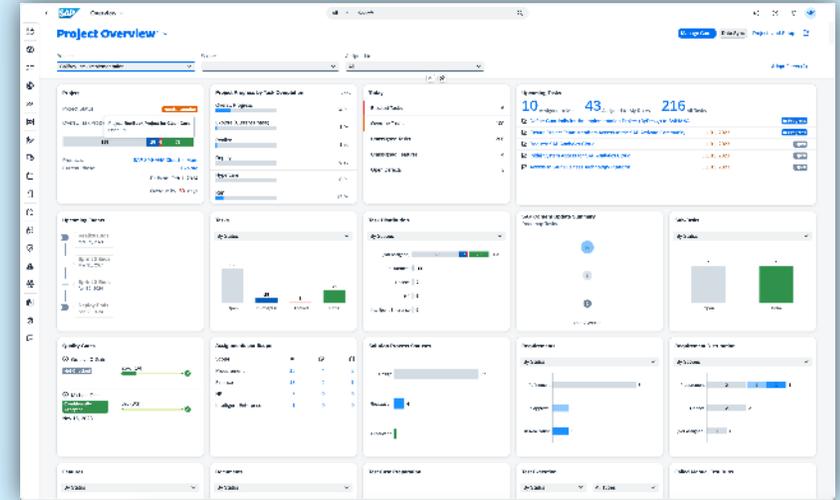

Proactive problem detection for integrations, exceptions, jobs, performance and accelerated problem resolution with automated corrective actions

Service

Collaborative workspace for consumption of SAP services, management of service results and follow-up activities

Transformation

Comprehensive environment to manage clean core projects in five aspects: business processes, extensibility, data, integration, and operations

Facts and figures

14.k+

Customers around the world

Low TCO

Included in Subscription and Maintenance

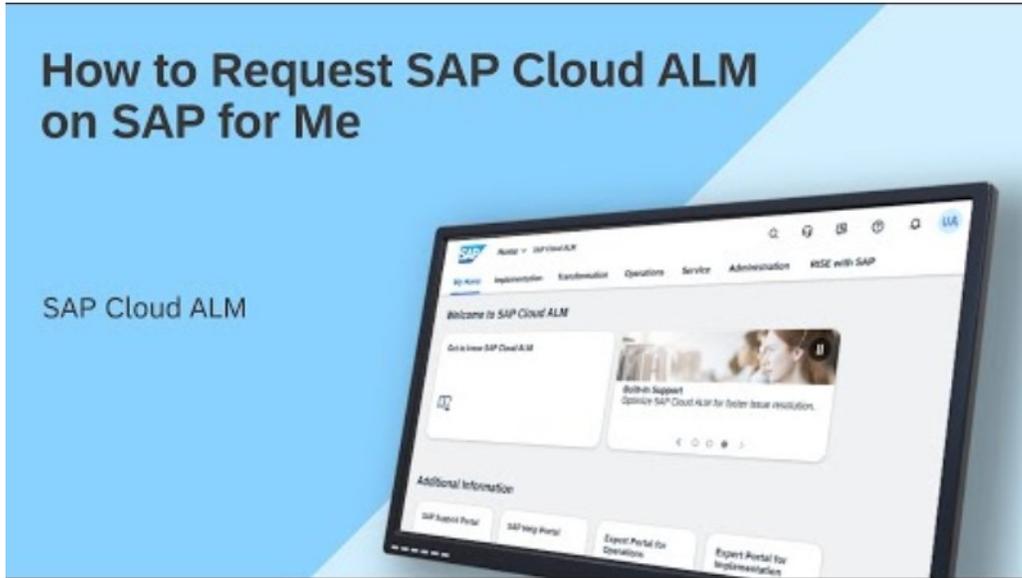

Holistic

Supports Implementation, Operations, Service & Transformation

SaaS Native

Solution available worldwide

Provision SAP Cloud ALM tenant

Business AI in SAP ALM

Optimize & Automate **cloud operations**

GenAI library documentation:
<https://pages.github.tools.sap/CALMBuild/x-genai-lib/>

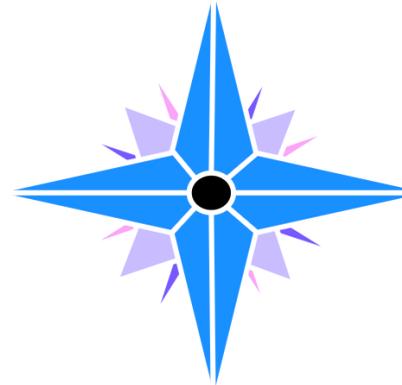

Reduce **configuration efforts**

2. Operations Accelerators

Efficient **issue resolution** by analyzing issue details, root cause determination and **solution recommendation**.

1. Simplify Cloud ALM Configuration

Reduce configuration efforts by **automatically** detecting scenarios and dynamic **thresholds**.

3. Implementation Accelerators

Expedite and Simplify project delivery

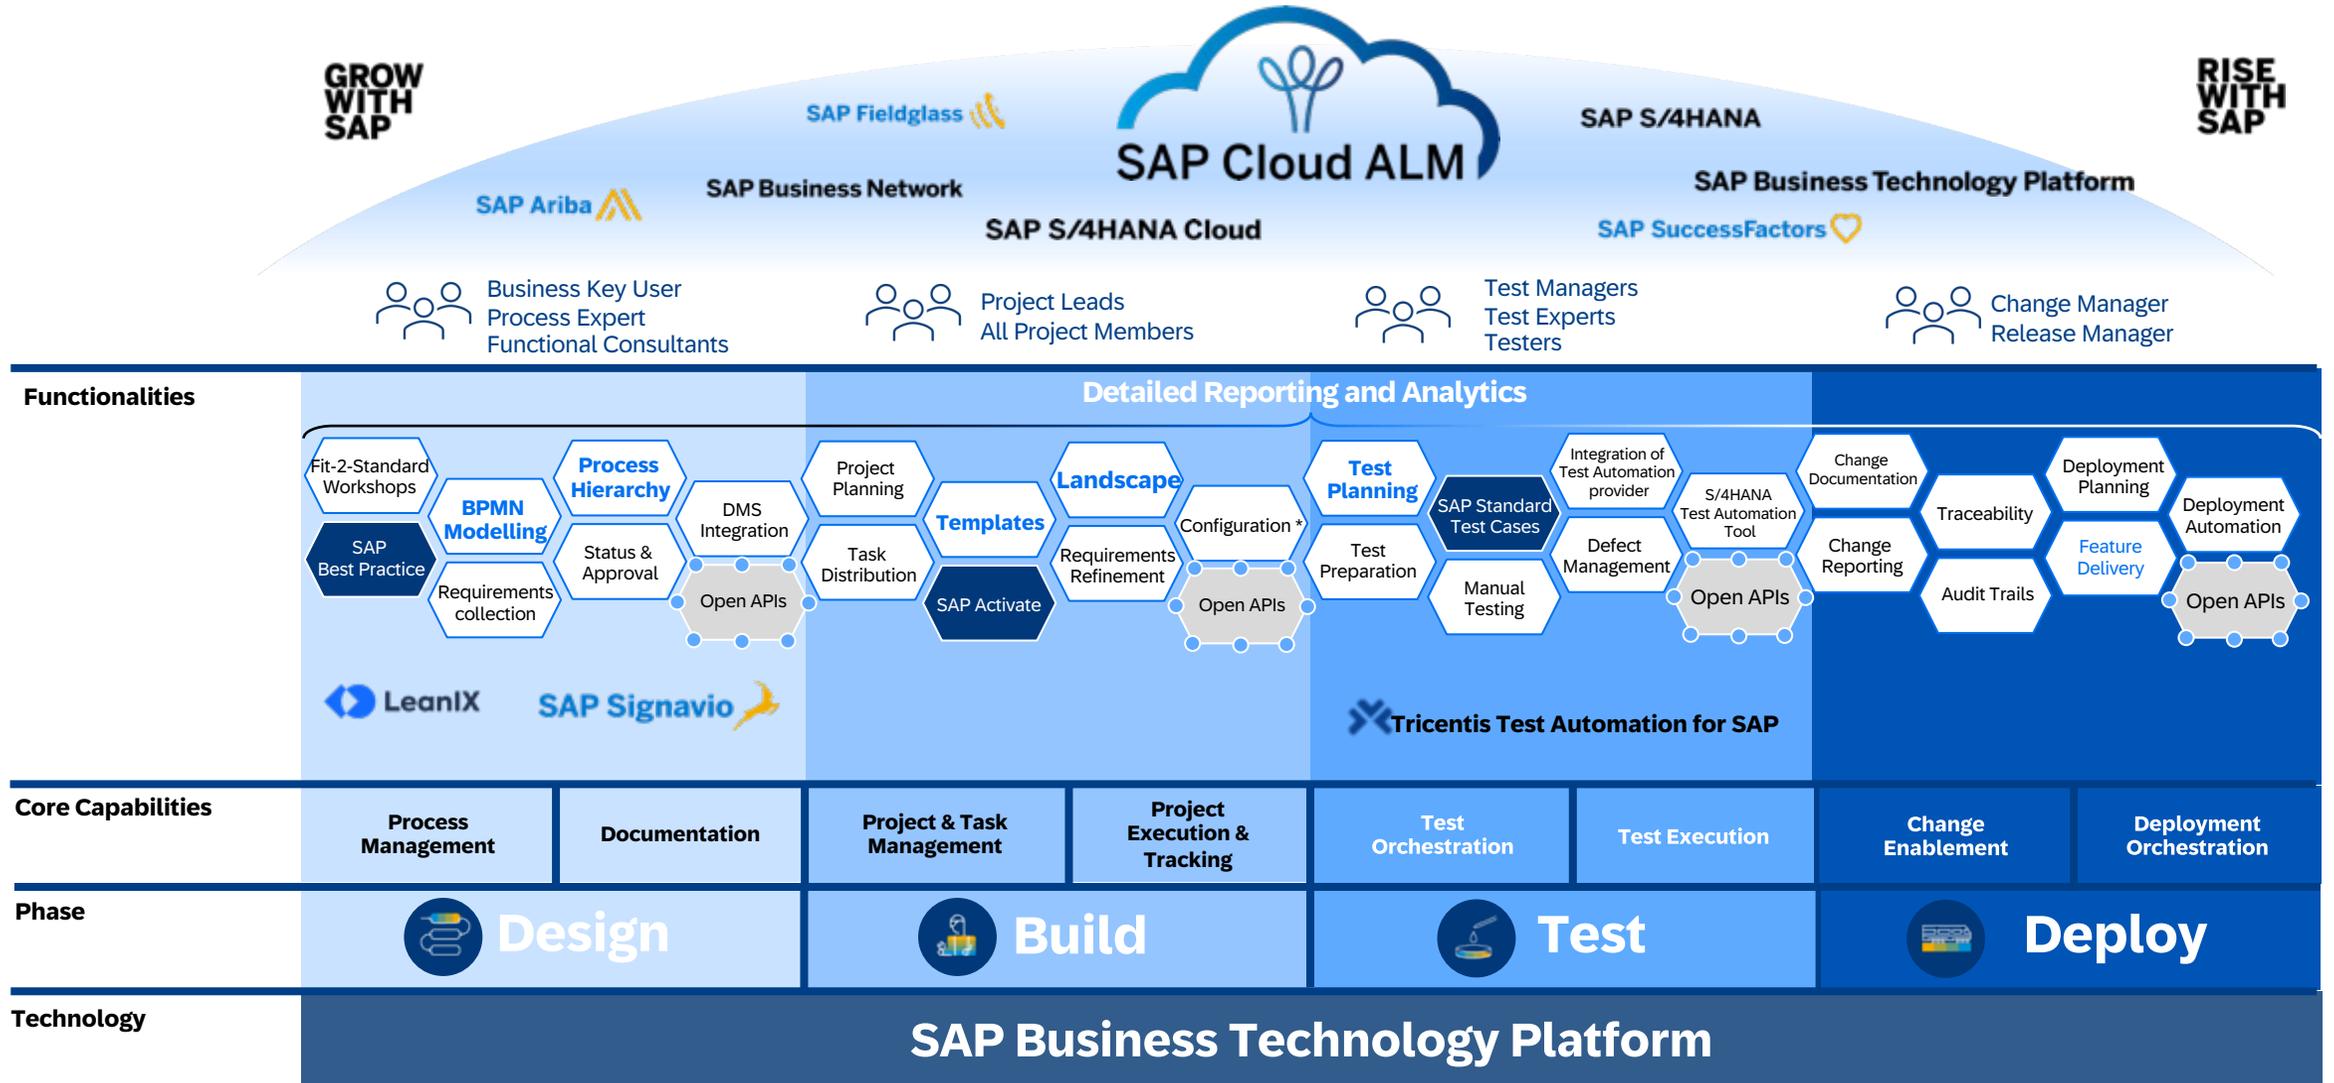

4. Cloud ALM Analytics

Enabling automatic **data analysis**, and facilitating **proactive actions**

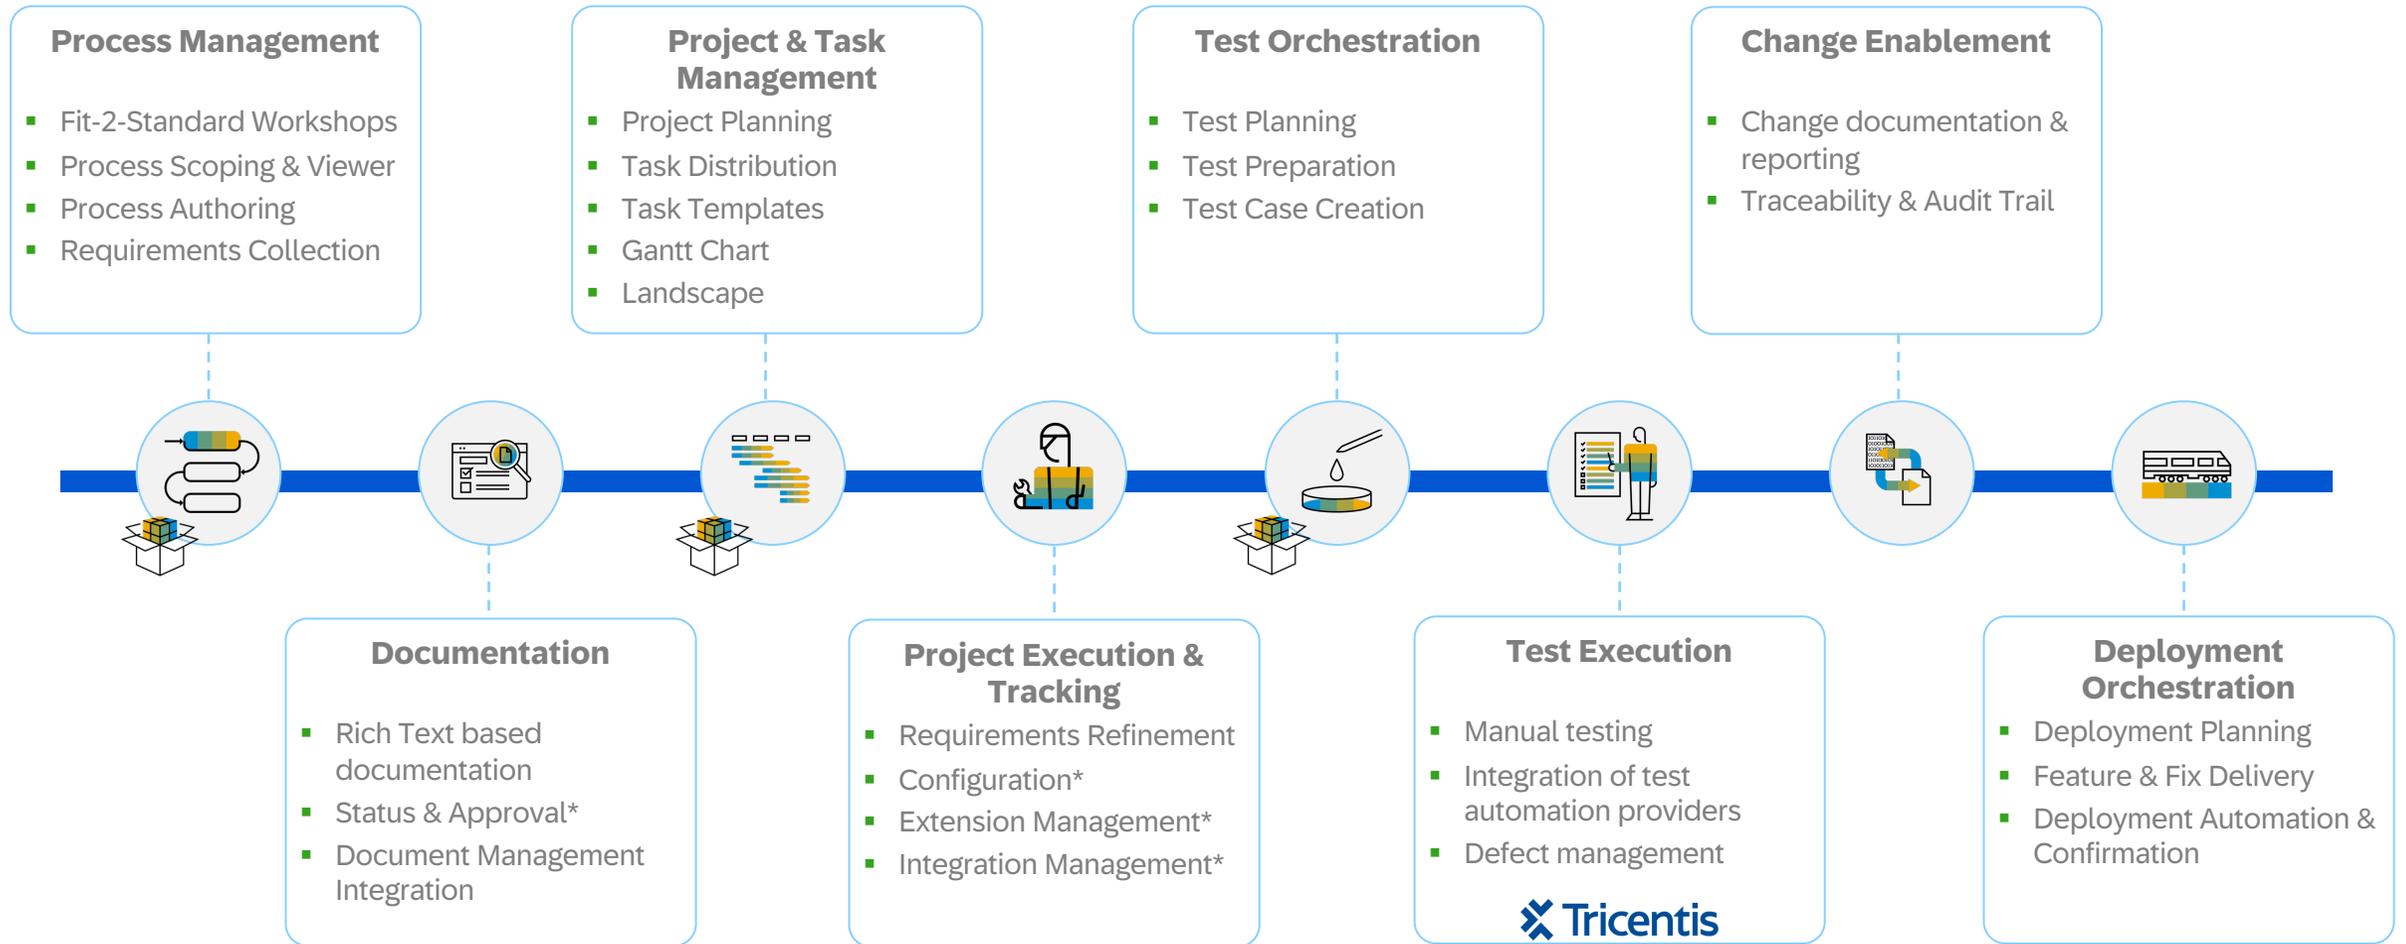

Utilize **predictive analytics** and intelligent **insights** to guarantee users access the most pertinent and relevant data.

Accelerate project execution by **generating** crucial project artifacts, including documents, requirements, test cases, and user stories...

The full picture

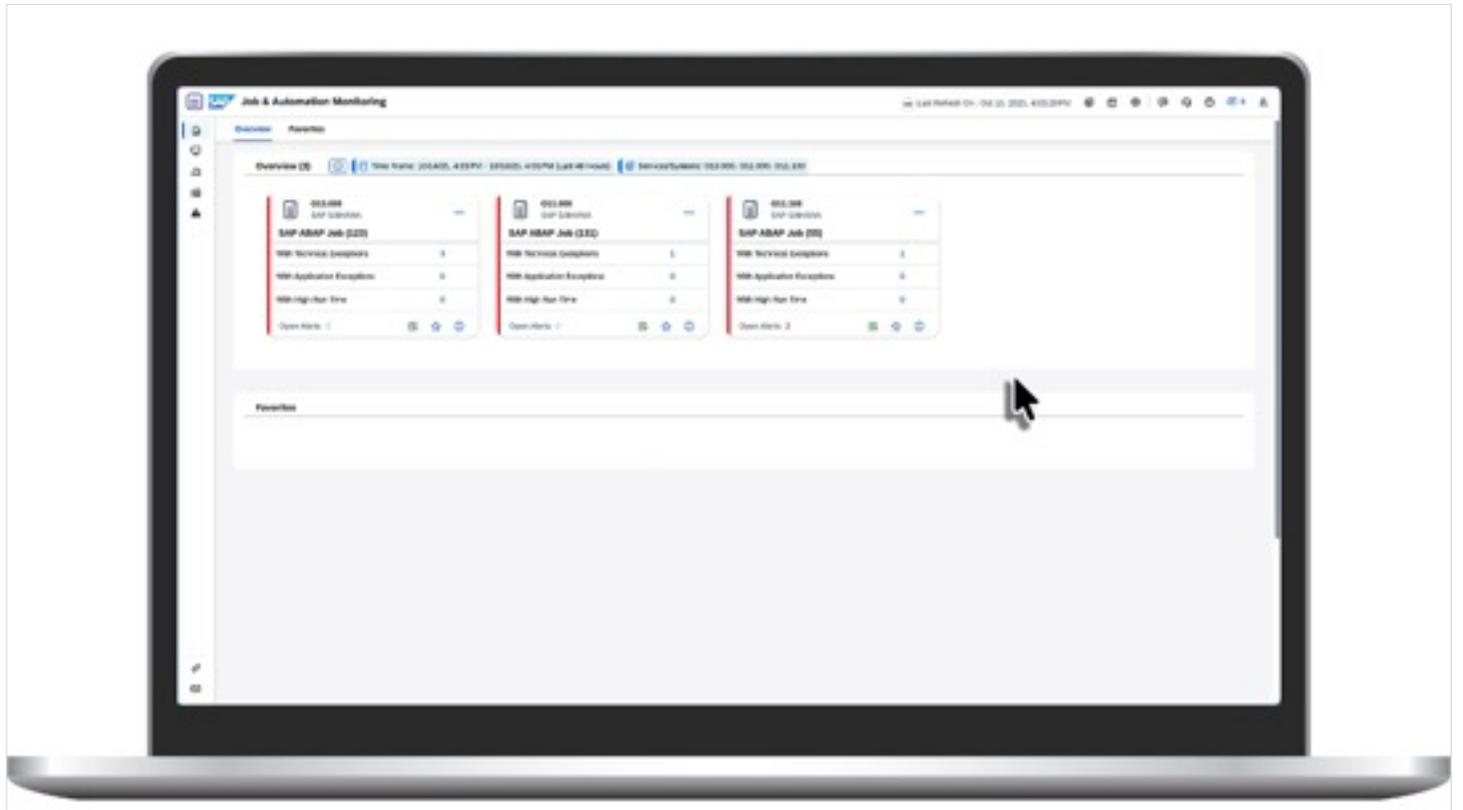

Capabilities

Integration of Alerts into Tasks, User Stories & Features

- Create Tasks as a follow-up to alerts in all monitoring capabilities
 - Manual Tasks
 - User Stories
- Create Features as follow-up to manage transports for fixes
- Can be used in addition to ITSM integration via public APIs

Overview (3) Time Frame: 10/14/25, 4:03 PM - 10/16/25, 4:03 PM (Last 48 Hours) Services/Systems: O13.000, O11.000, O11.100

SAP Cloud ALM safeguards operations

Introduction to SAP Cloud ALM for **operations**

Core capabilities

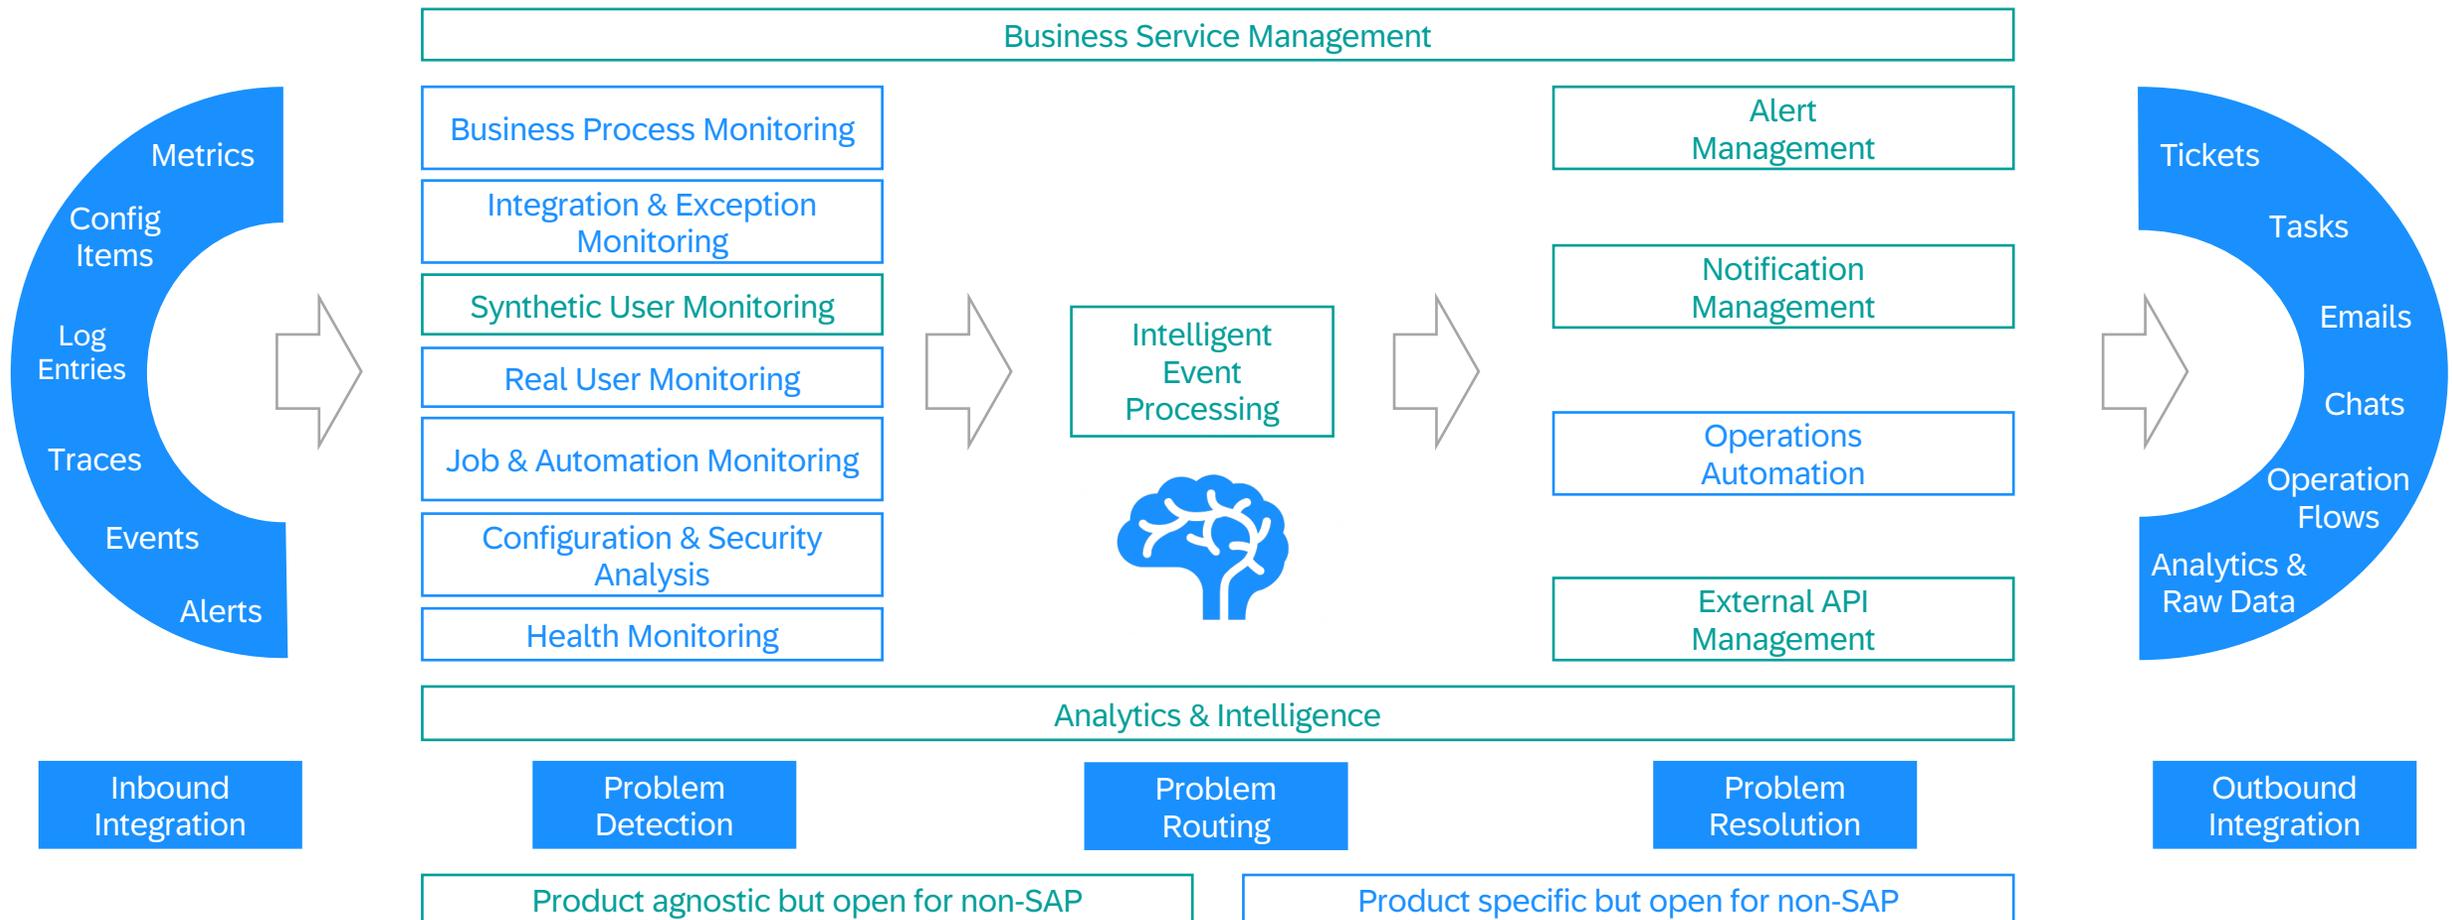

Drive business continuity in your SAP landscape by monitoring and alerting

SAP Cloud ALM for Operations – For SAP and Non-SAP

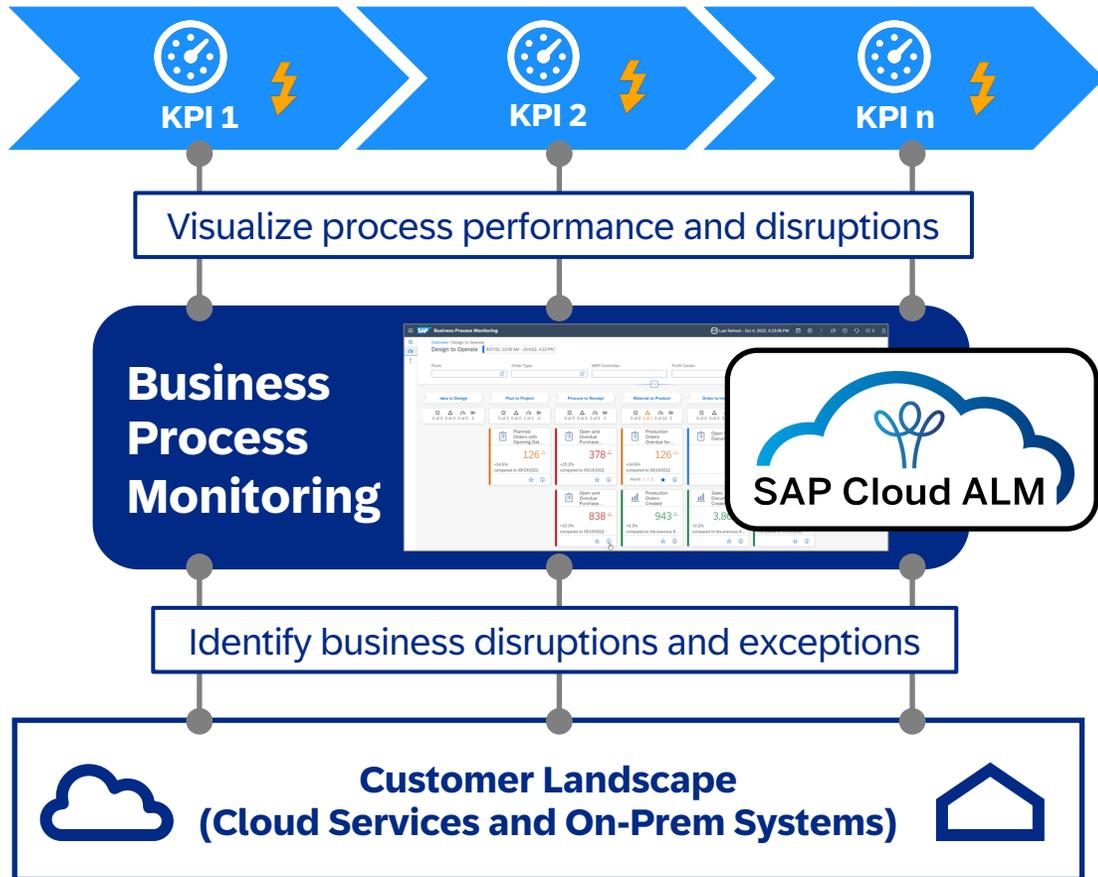

GROW WITH SAP

RISE WITH SAP

Business Process Monitoring

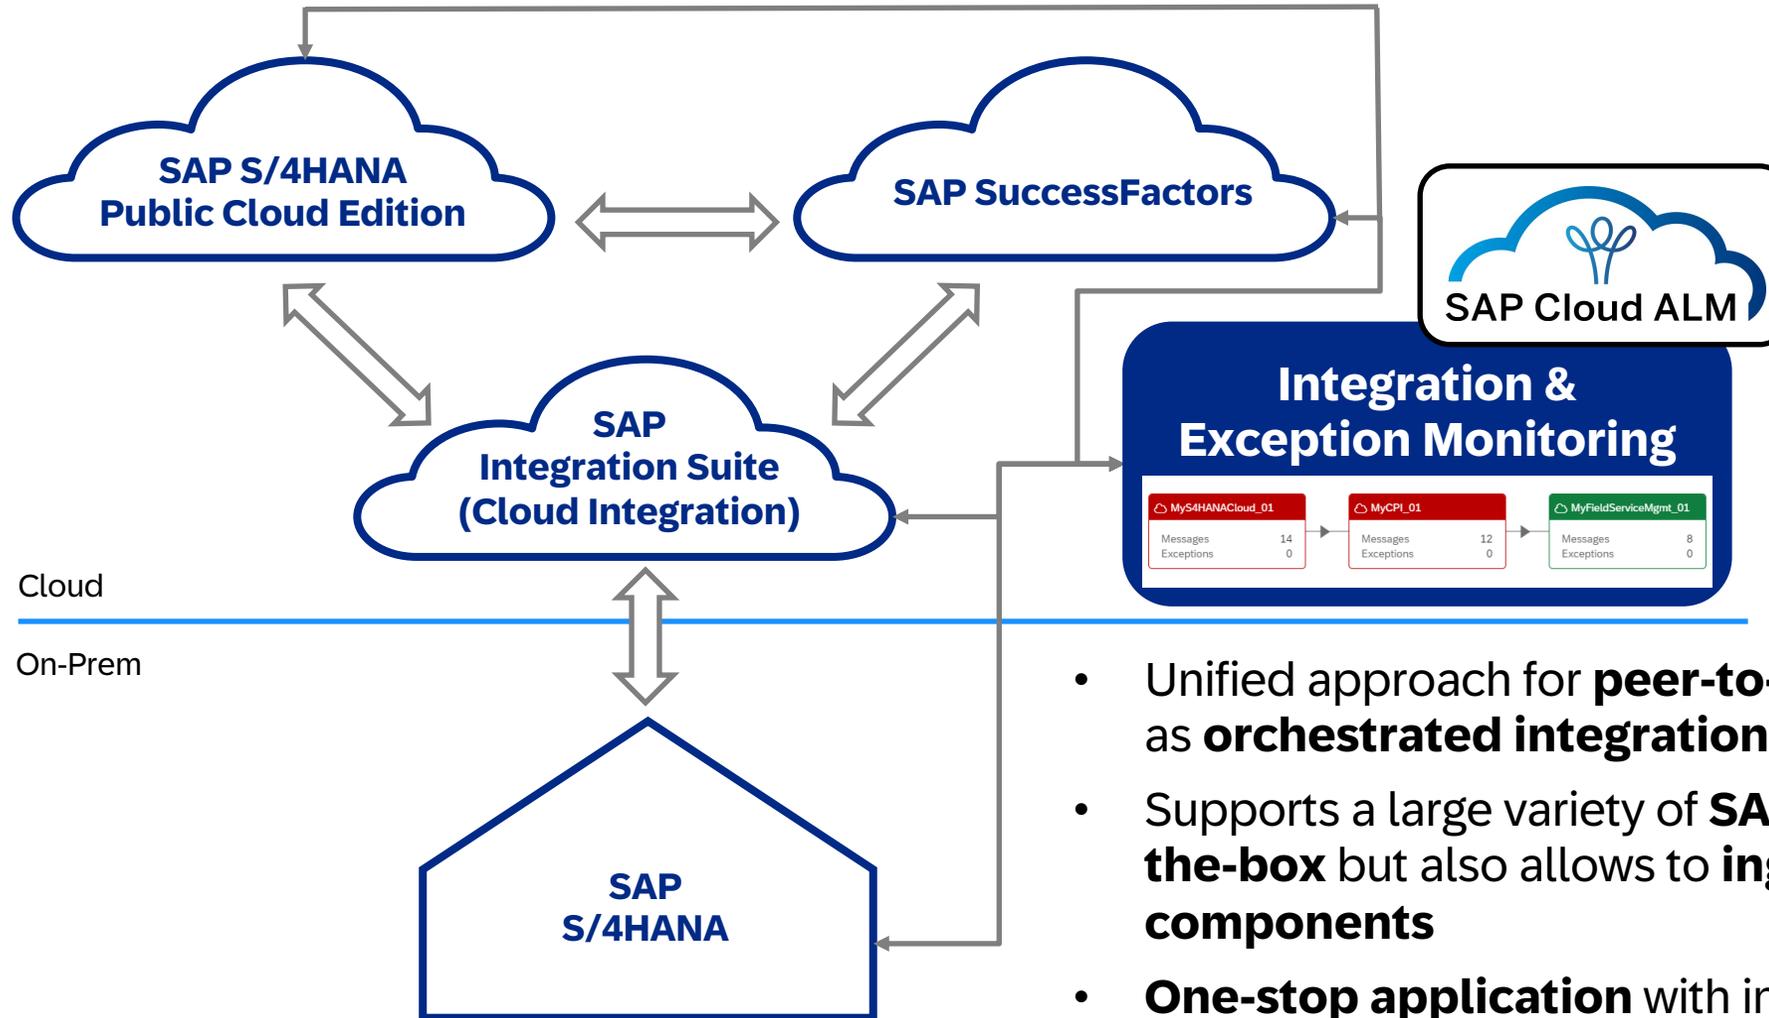

Detect Operational Issues in Business Process Execution and React to It

- Provides **transparency on end-to-end business processes** within a distributed solution landscape
- Ensures **business continuity** to increase business process execution quality and performance
- **Monitors processes' health and detect anomalies** during process execution including **drill down into business documents**
- **Alerts users directly on process disruptions** including **automated problem resolution**
- Delivers **pre-defined process content** including **auto-discovery of relevant business process KPI's** to be switched on

Integration & Exception Monitoring

Ensure Reliable Data Exchange between Cloud Services and Systems

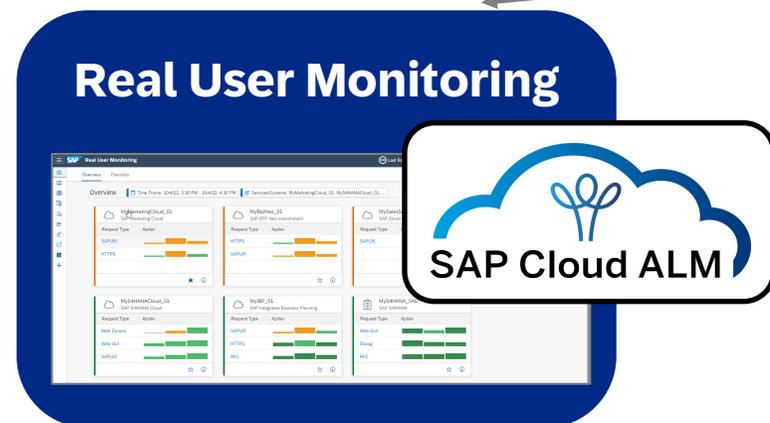

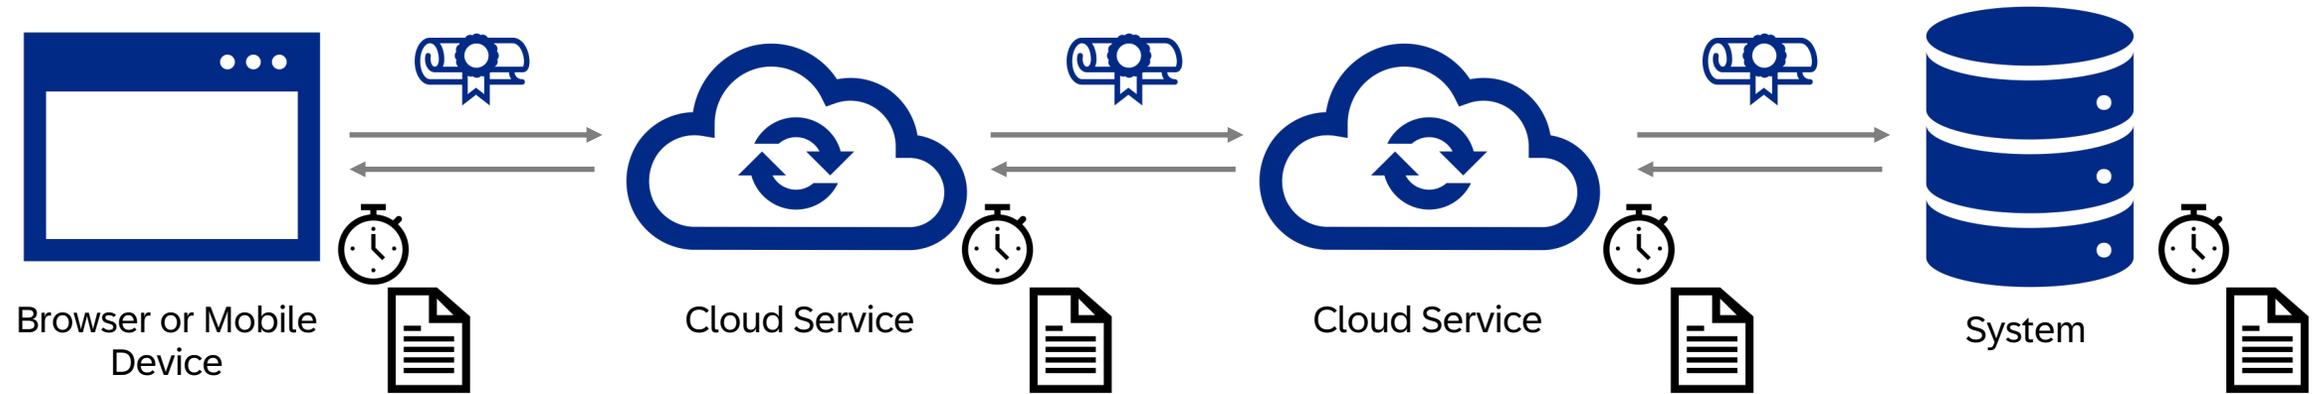

- **End-to-End monitoring** by correlating single messages to **end-to-end message flows** across cloud services and systems
- Monitoring of **integration related exceptions**

- Unified approach for **peer-to-peer interfaces** as well as **orchestrated integration**
- Supports a large variety of **SAP components out-of-the-box** but also allows to **ingest data for non-SAP components**
- **One-stop application** with integrated monitoring, alerting, analysis, and search-and-track functionality

Real User Monitoring

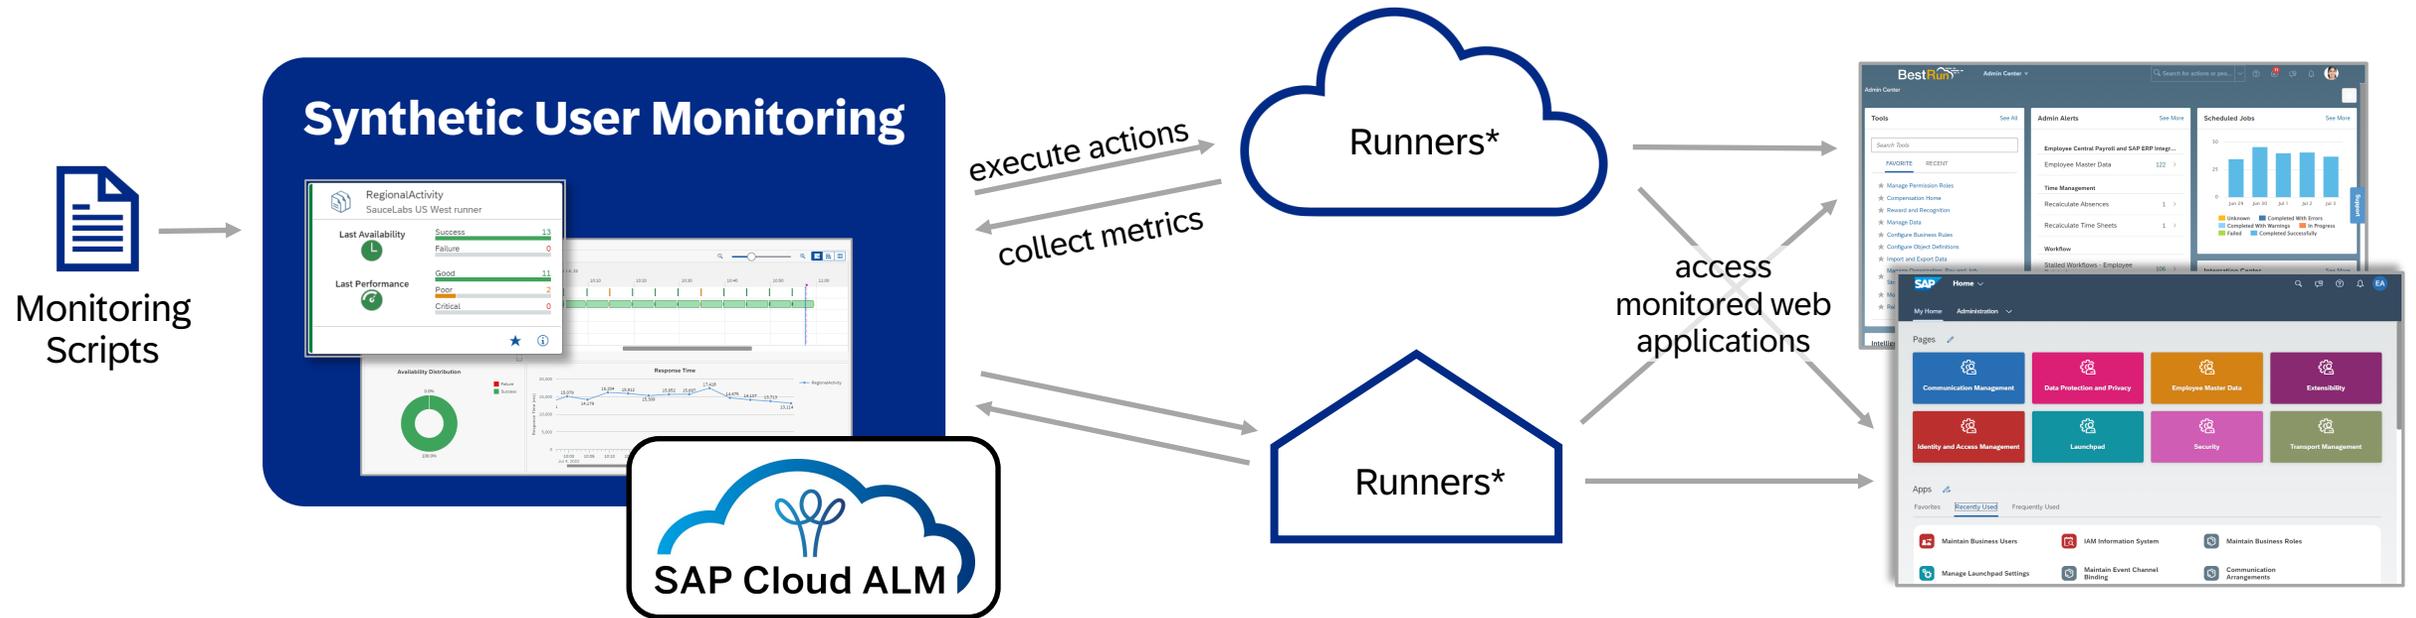

Allow to Understand Performance and Utilization from End User Perspective

- Provides transparency regarding **performance and errors as experienced by end users** as well as **utilization of business functionality**
- Measurement at frontend and server side **to identify actual root cause of performance and functional problems**
- Allows to **correlate monitoring data** measured at frontend, cloud service and/or system side to **end-to-end user request flows**

Synthetic User Monitoring

Monitor Performance and Availability of Web Applications from User Perspective

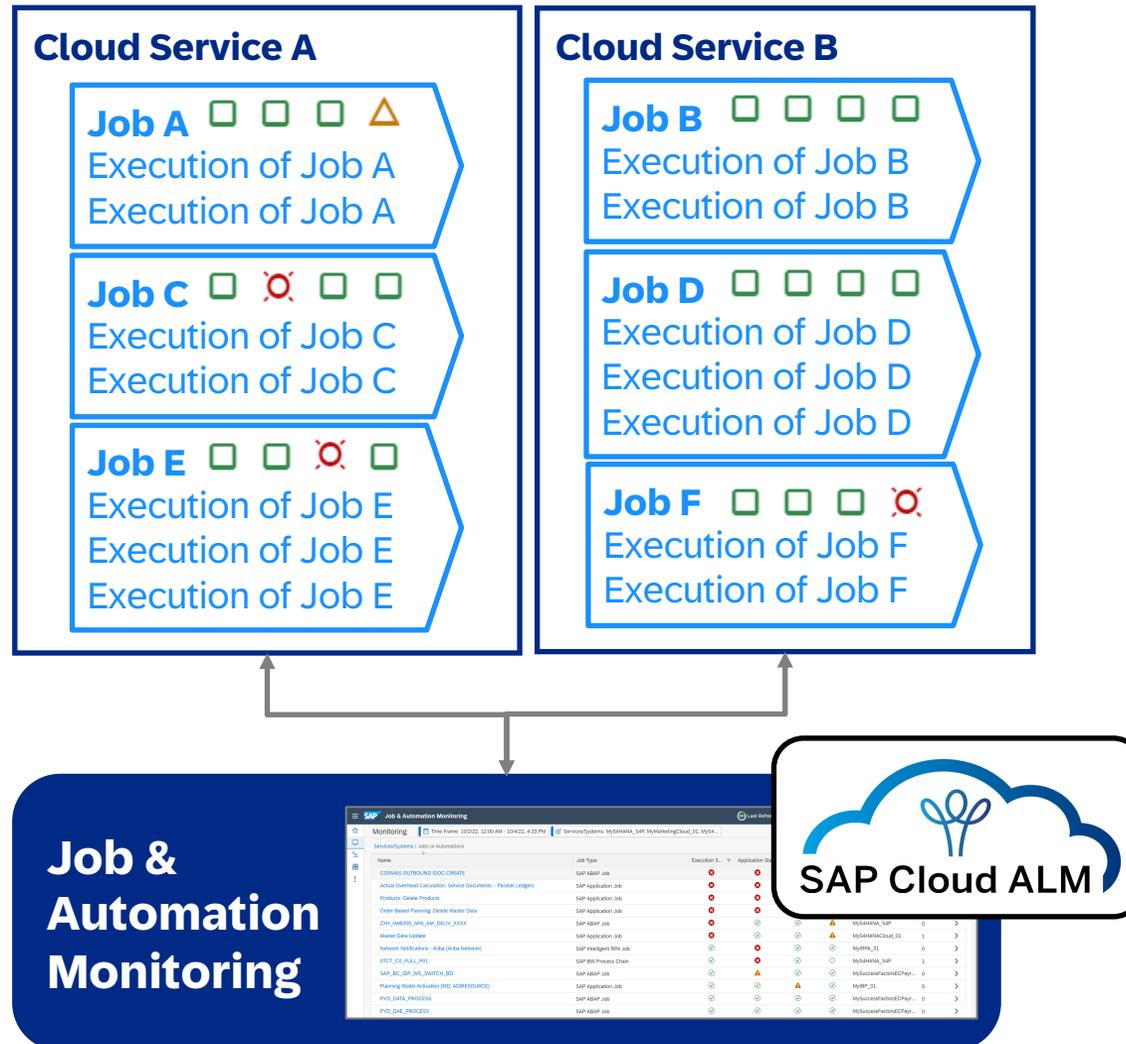

- Monitoring based on custom **Selenium based scripts** → Supports most of the web applications
- Regularly executed on **Selenium remote webdriver infrastructures**
- **Proactive problems detection:** 24x7 monitoring enables detection of performance and availability issues before end users are impacted → Runs **independently on real user activities**
- **Comparable measurements:** Monitoring relies on identical **user scenarios regularly executed** → Allows to monitor the **evolution of the performance and availability** based on comparable metrics

* Any compatible Selenium remote webdriver infrastructures

Job & Automation Monitoring

Provide Transparency Regarding Job Executions & Automated Activities

- **Monitoring** ensures **efficient execution of jobs and tasks**:
 - by monitoring **executions status, application status, start delay and response time** for jobs and tasks
 - by providing **details at job on task execution level** to enable root cause analysis
 - by **reducing configuration efforts** by making use of historical execution information
- **Embedded Alerting** enables notification of business and IT users on job & task related disruptions and exceptions
- **Embedded Analytics** allows to analyze root causes and trends based on historical data

Configuration & Security Analysis

Validate Configuration Items and Software Levels Automatically and Regularly

Existing functionality

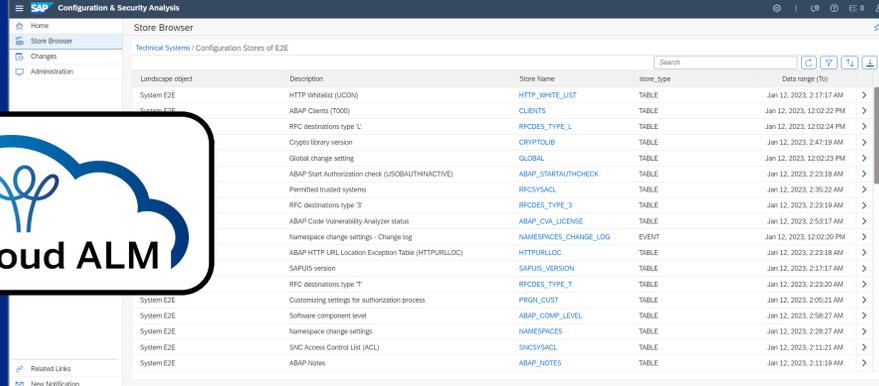

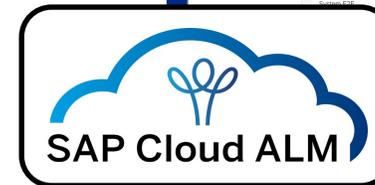

- **Regular collection of configuration items and software levels** into the configuration stores of the Configuration Change Database
- **Store browser** as user interface to **visualize content of configuration stores**
- **Change analysis** for selected scope and timeframe
- **Search capability** for pattern-based browsing into configuration items of selected scope

Planned functionality

- **Configuration validation** to compare TO-BE with AS-IS situation
- **Embedded alerting** to notify on critical issues
- **Embedded analytics** to analyze trends and root causes for discovered problems

Configuration & Security Analysis

Configuration Change Database

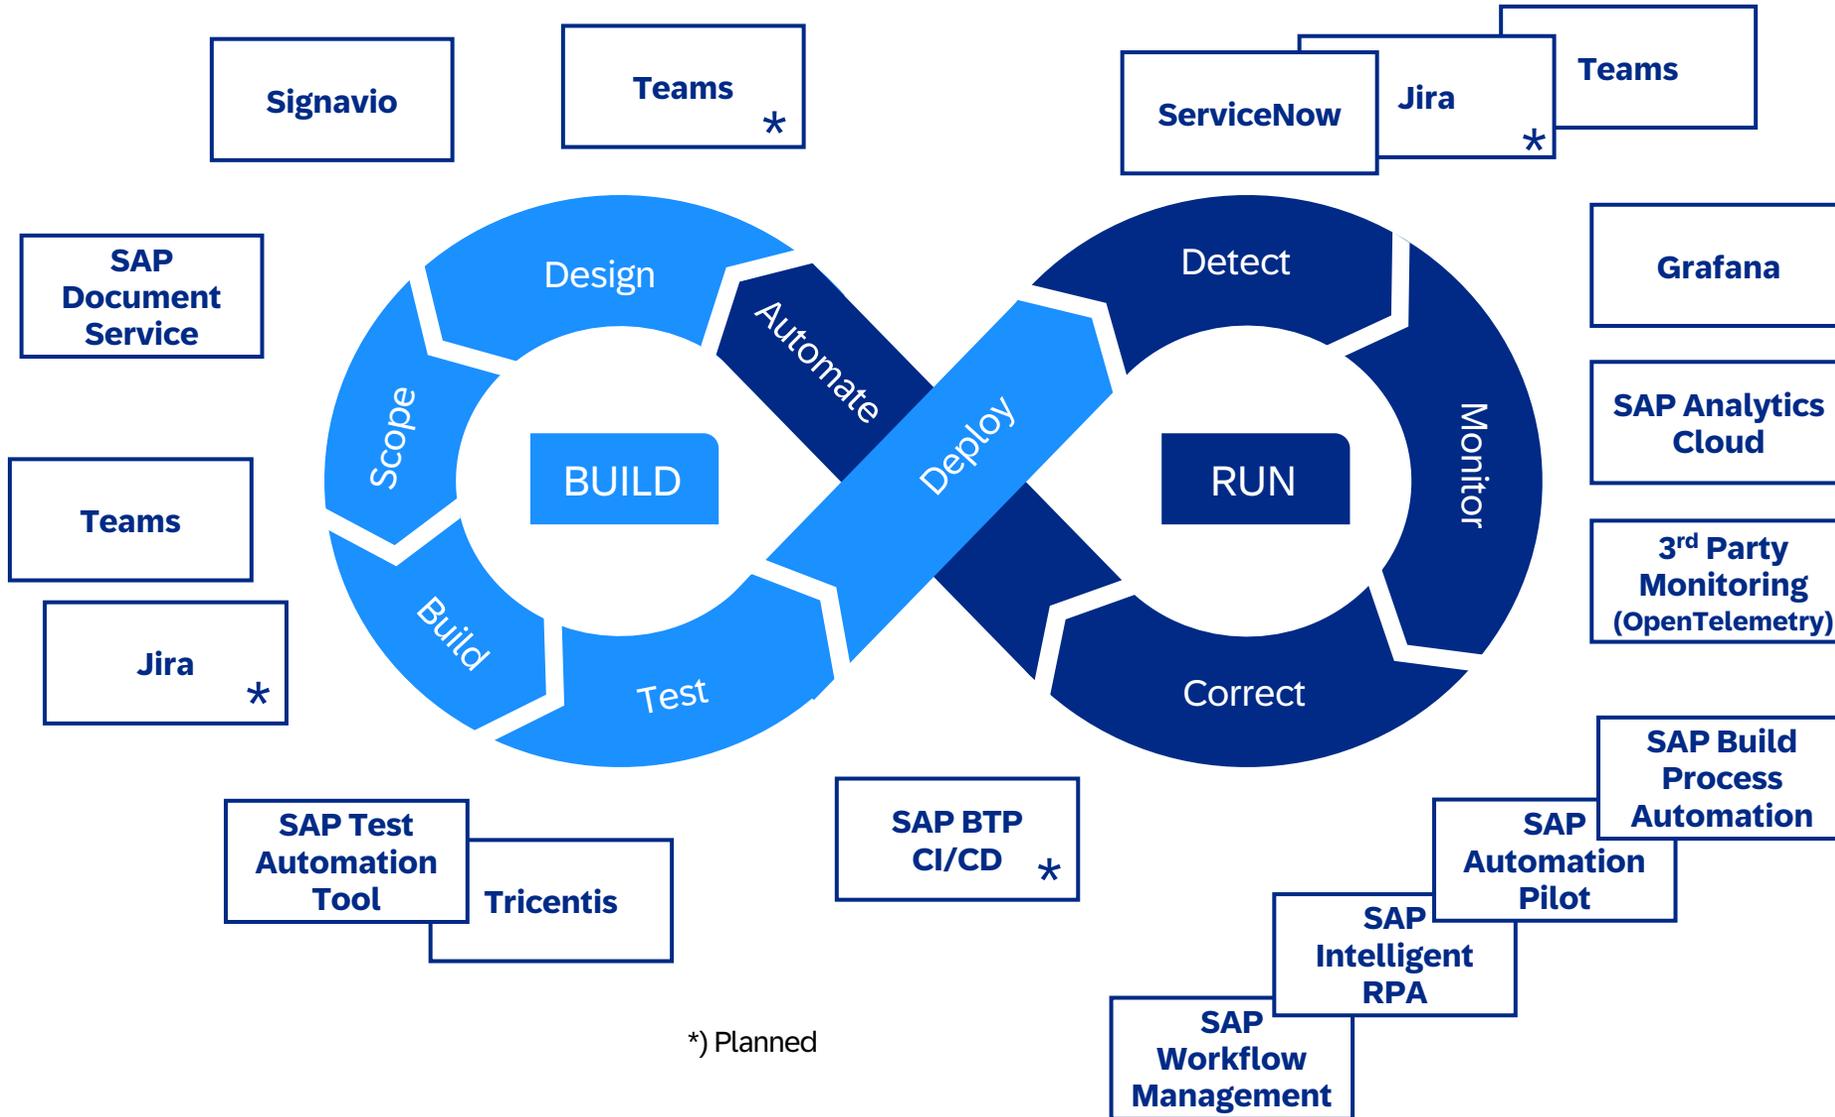

Health Monitoring

Check Application Health of Cloud Services and Systems

- **Monitoring of technical KPI's** for services and systems:
 - By executing **application health checks for SAP SaaS services**
 - By delivering **metrics for customer applications** built at SAP Business Technology Platform (SAP PaaS Services)
 - By providing metrics for **light-weight system monitoring** for SAP ABAP and associated system types e.g. SAP Cloud Connector
- Provides **embedded alerting** including the capability to **trigger notifications and corrective actions**
- Allows **embedded analytics** to **analyze trends and root causes** for discovered problems

External API Management // Operations Automation

*) Planned

External API Management

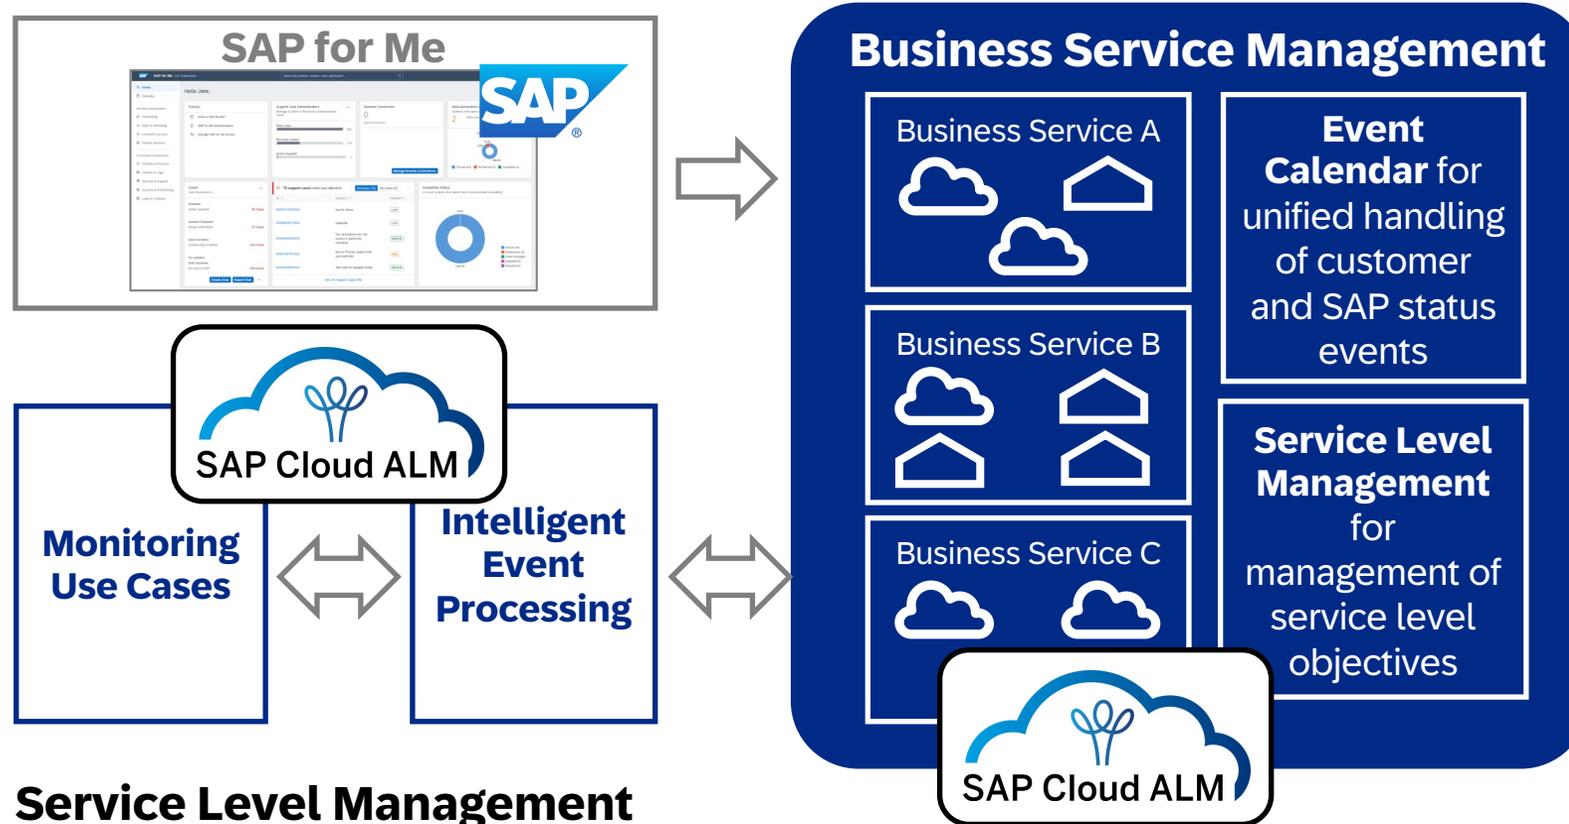

- **Watch and react on events** from SAP Cloud ALM
- **Subscribe to external services** and to **trigger actions there**
- Use **built-in mappings** for selected services ServiceNow, Teams, ...
- **Expose mass volume data API's** to 3rd party analysis and monitoring

Operations Automation

- Allow to **trigger operation flows** from events in SAP Cloud ALM
- **Integrate several automation engines** as SAP Build Process Automation and SAP Automation Pilot

Business Service Management

Expose IT Related Information to be Understood by Business Users

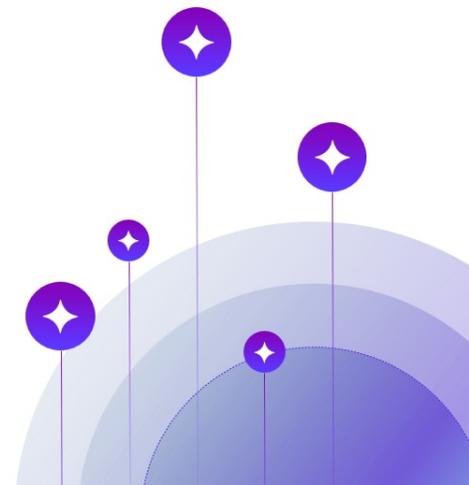

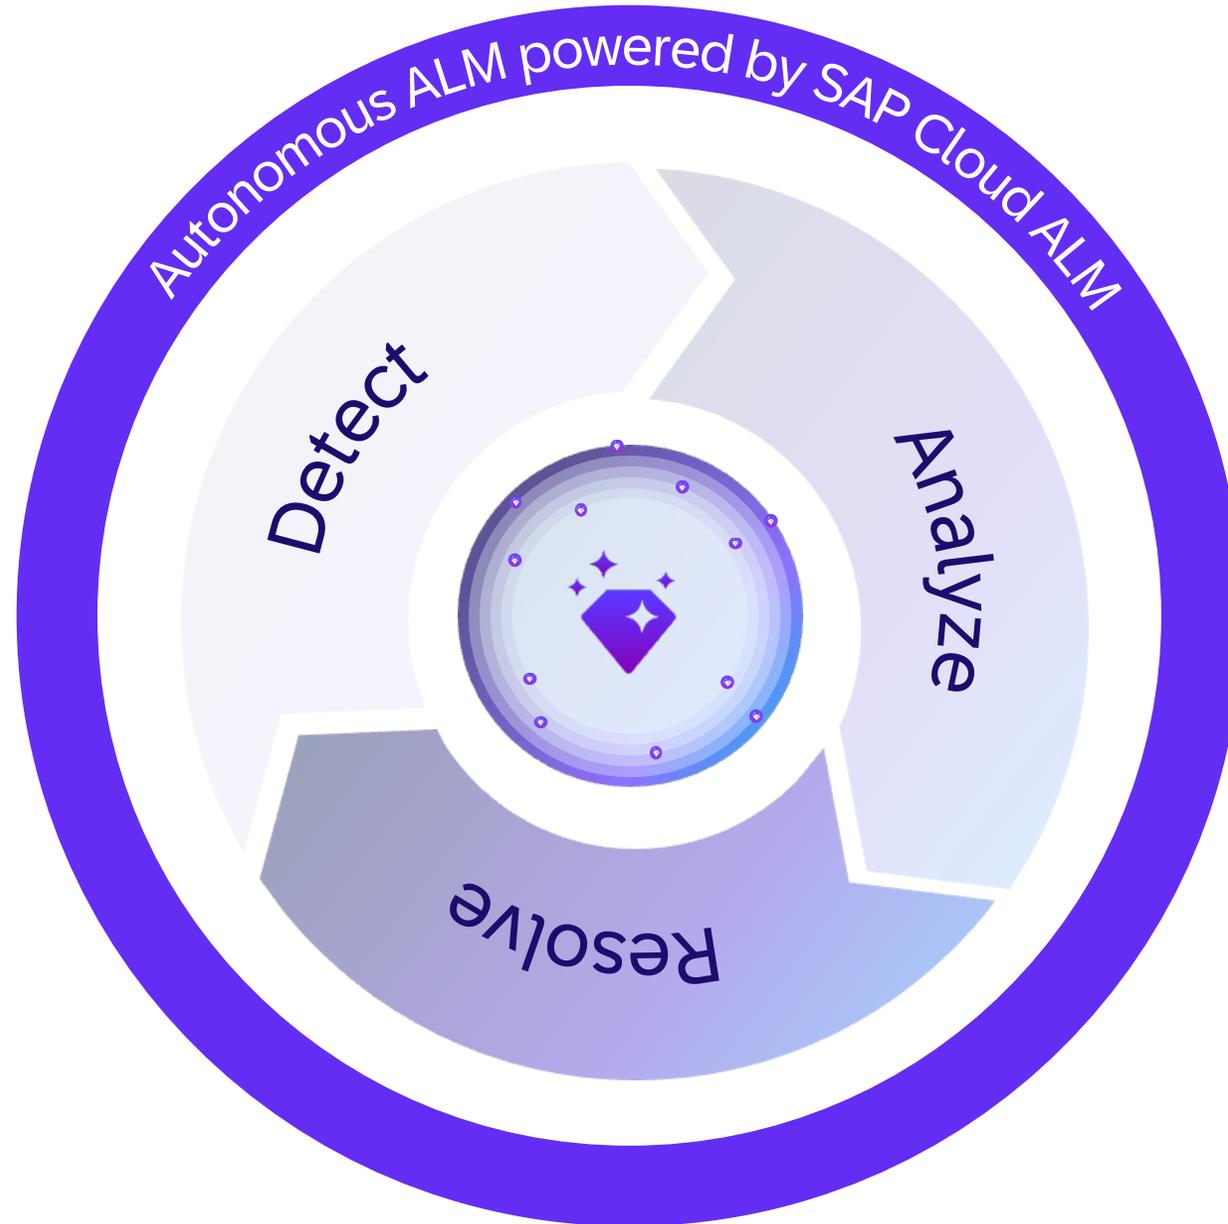

Event Calendar

- Business services as **collection of services and systems**
- Automatic import of **SAP initiated status events** (maintenance, disruptions, degradation, ...)
- Maintenance and automatic execution of **customer initiated status events**
- **Visualization of status events** in different monitoring use cases
- **Calculation of status events** by monitoring use cases and **forwarding to Business Service Management** (planned)

Service Level Management

- Definition of **service level objectives** at business service level
- Automatic and continuous **calculation of actual service level** and consolidation at business services level
- **Embedded service level reporting** including drill down

AI Vision – SAP Cloud ALM

- Load Stored card
- Response Time of active users

Please [input field] [send icon]

Joule uses AI. Verify results.

Requirements Generation from F2S Workshop

AI-assisted Requirement Capture

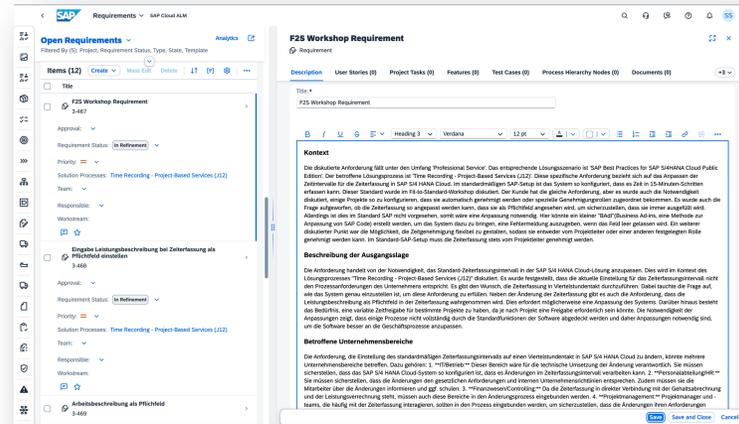

Goals

Carla
Functional Project Consultant

“I want to accelerate the documentation of customer requirements based on my fit-to-standard meeting minutes and recording.”

Solution

Benefits

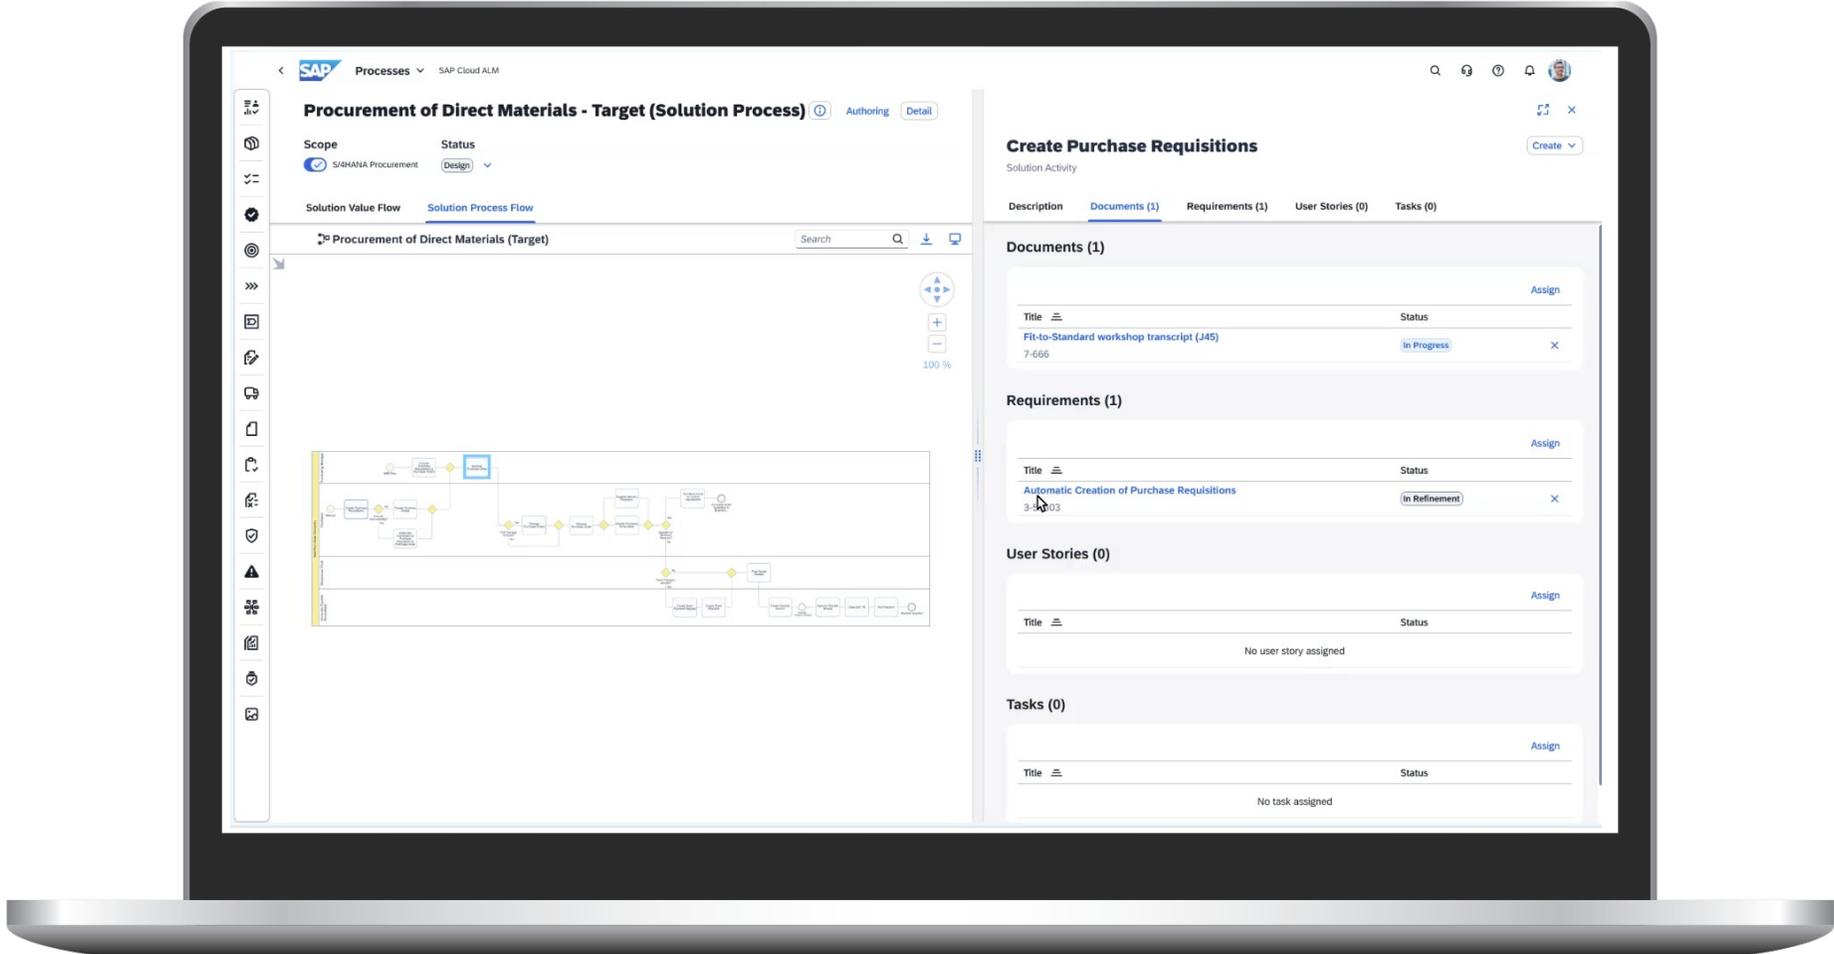

50%
Requirements Creation
Time Savings

20%
User Story Creation
Time Savings

Improved
Documentation Quality and
Completeness

Capture customer requirements during Fit-to-Standard workshops using meeting minutes and recordings. Find solutions with SAP Activate & Help content. Complete requirement details with GenAI features based on customer templates.

This helps Carla to capture customer requirements during Fit-to-Standard workshops, generate documentation with consistent detail and quality across the project, and find the right solutions to meet these requirements efficiently.

Dynamic Thresholds in Synthetic User Monitoring

AI-assisted thresholds

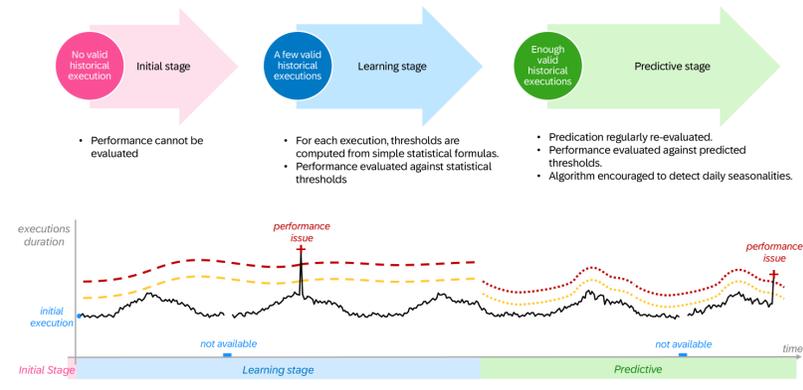

Goals

Mark
Operations Lead

I want to ensure our SAP landscape alerts only when it truly matters, without wasting time fine-tuning static thresholds or dealing with unnecessary false alarms.

Solution

Use Dynamic Thresholds in SAP Cloud ALM to automatically calculate performance baselines from historical execution data. The system regularly adjusts thresholds to reflect natural fluctuations and seasonality, then compares current execution durations against these dynamic values. This helps Mark focus on real performance issues, reduces noise from false positives, and provides higher confidence in the alerting process - without ongoing manual configuration.

Benefits

Reduced false alerts

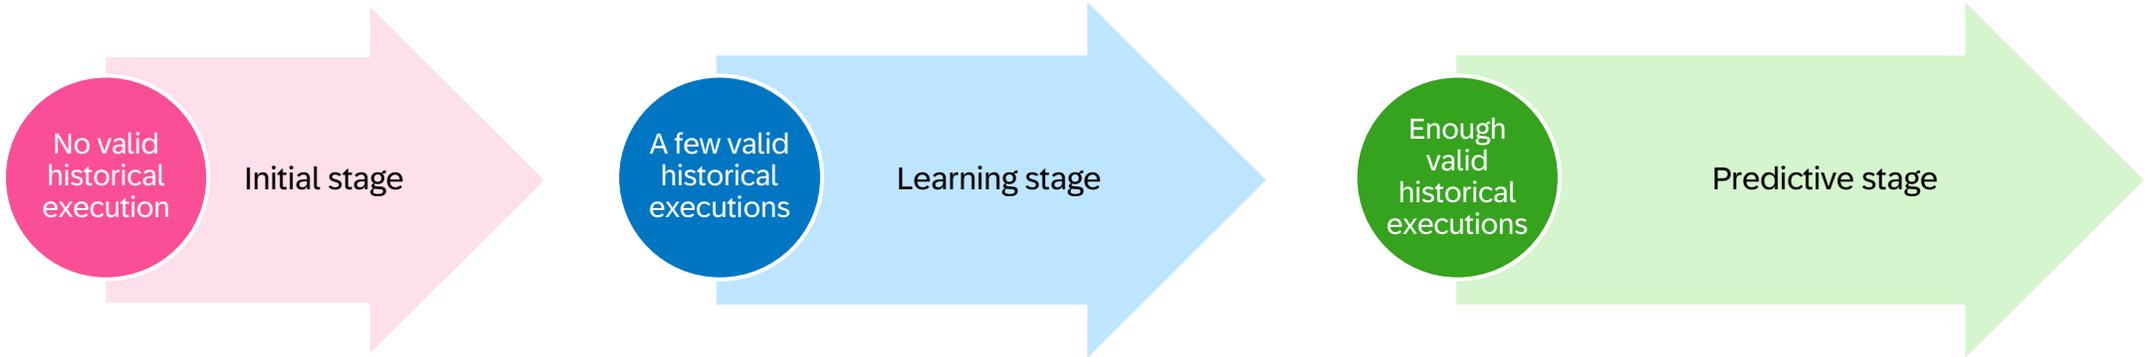

through seasonality-aware thresholds

Higher confidence

in identifying true performance degradations

No manual threshold maintenance

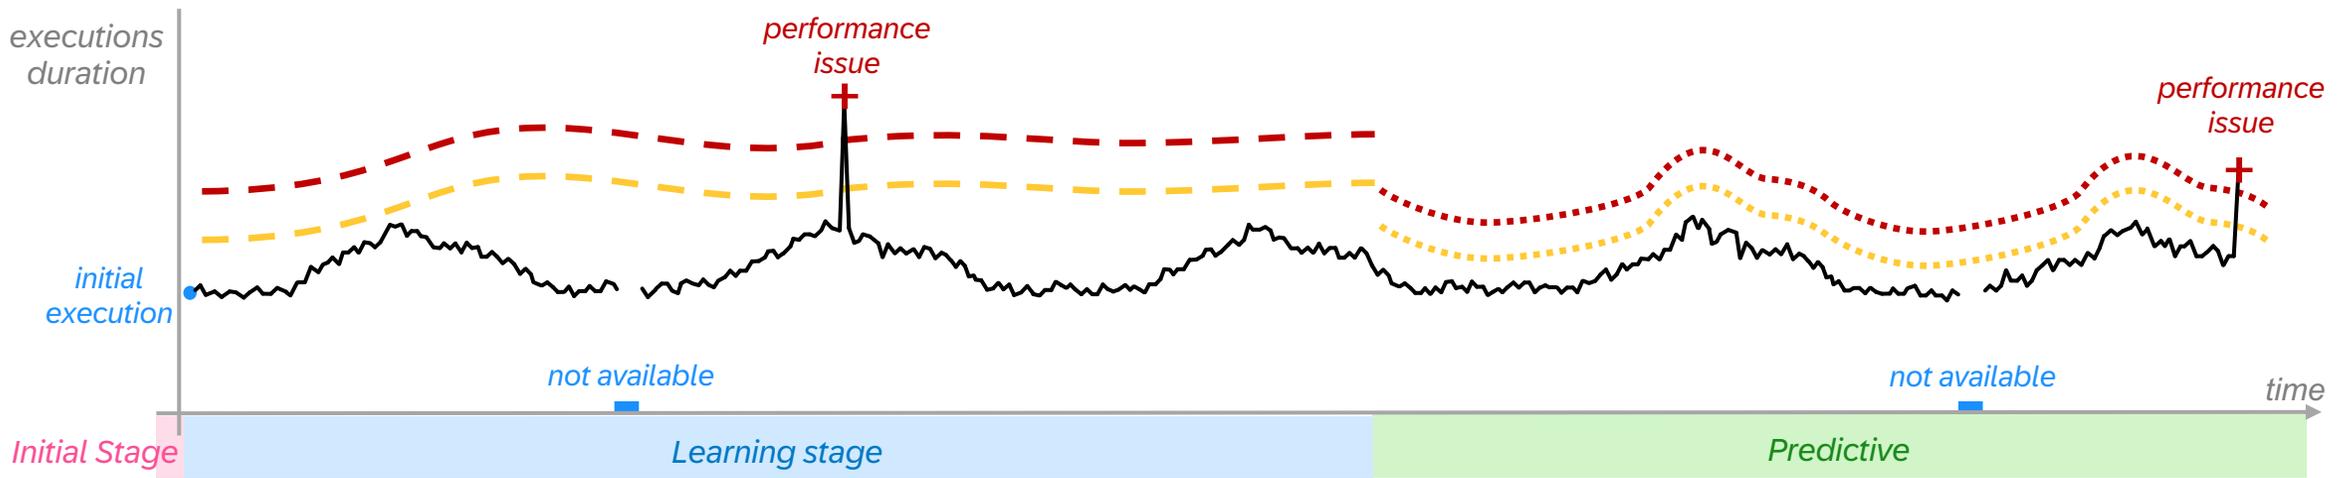

Lower operational effort

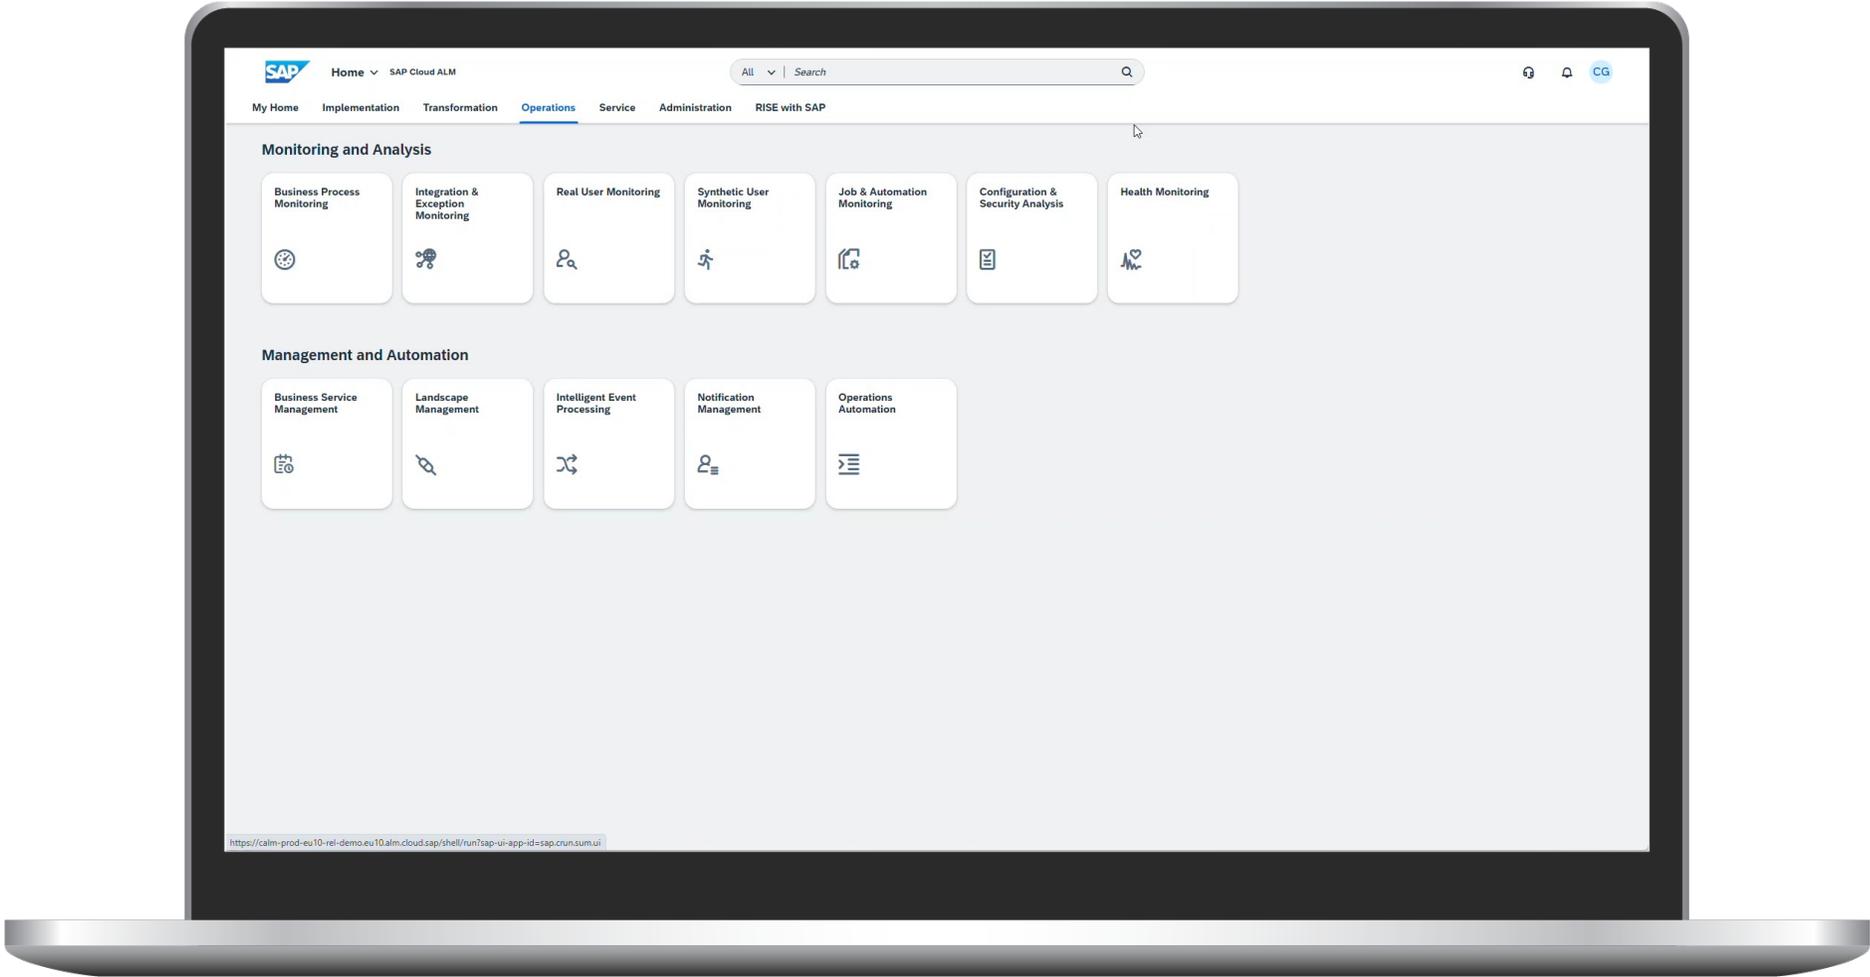

- Performance cannot be evaluated

- For each execution, thresholds are computed from simple statistical formulas.
- Performance evaluated against statistical thresholds

- Predication regularly re-evaluated.
- Performance evaluated against predicted thresholds.
- Algorithm encouraged to detect daily seasonalities.

Automate Problem Detection and Alert Resolution

AI Assisted Alert Resolution

Issue Detection and Resolution Agent

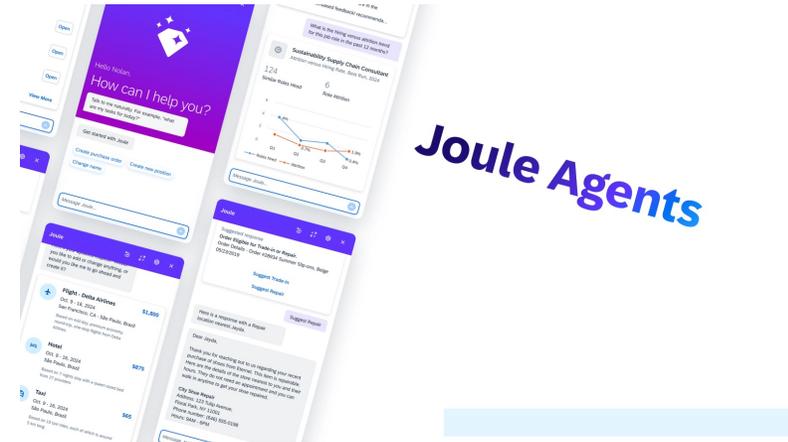

Goals

Sonia
Site Reliability Engineer

I want to resolve alerts faster without spending time digging through logs, documentation, or past incident history especially when multiple systems are involved.

Solution

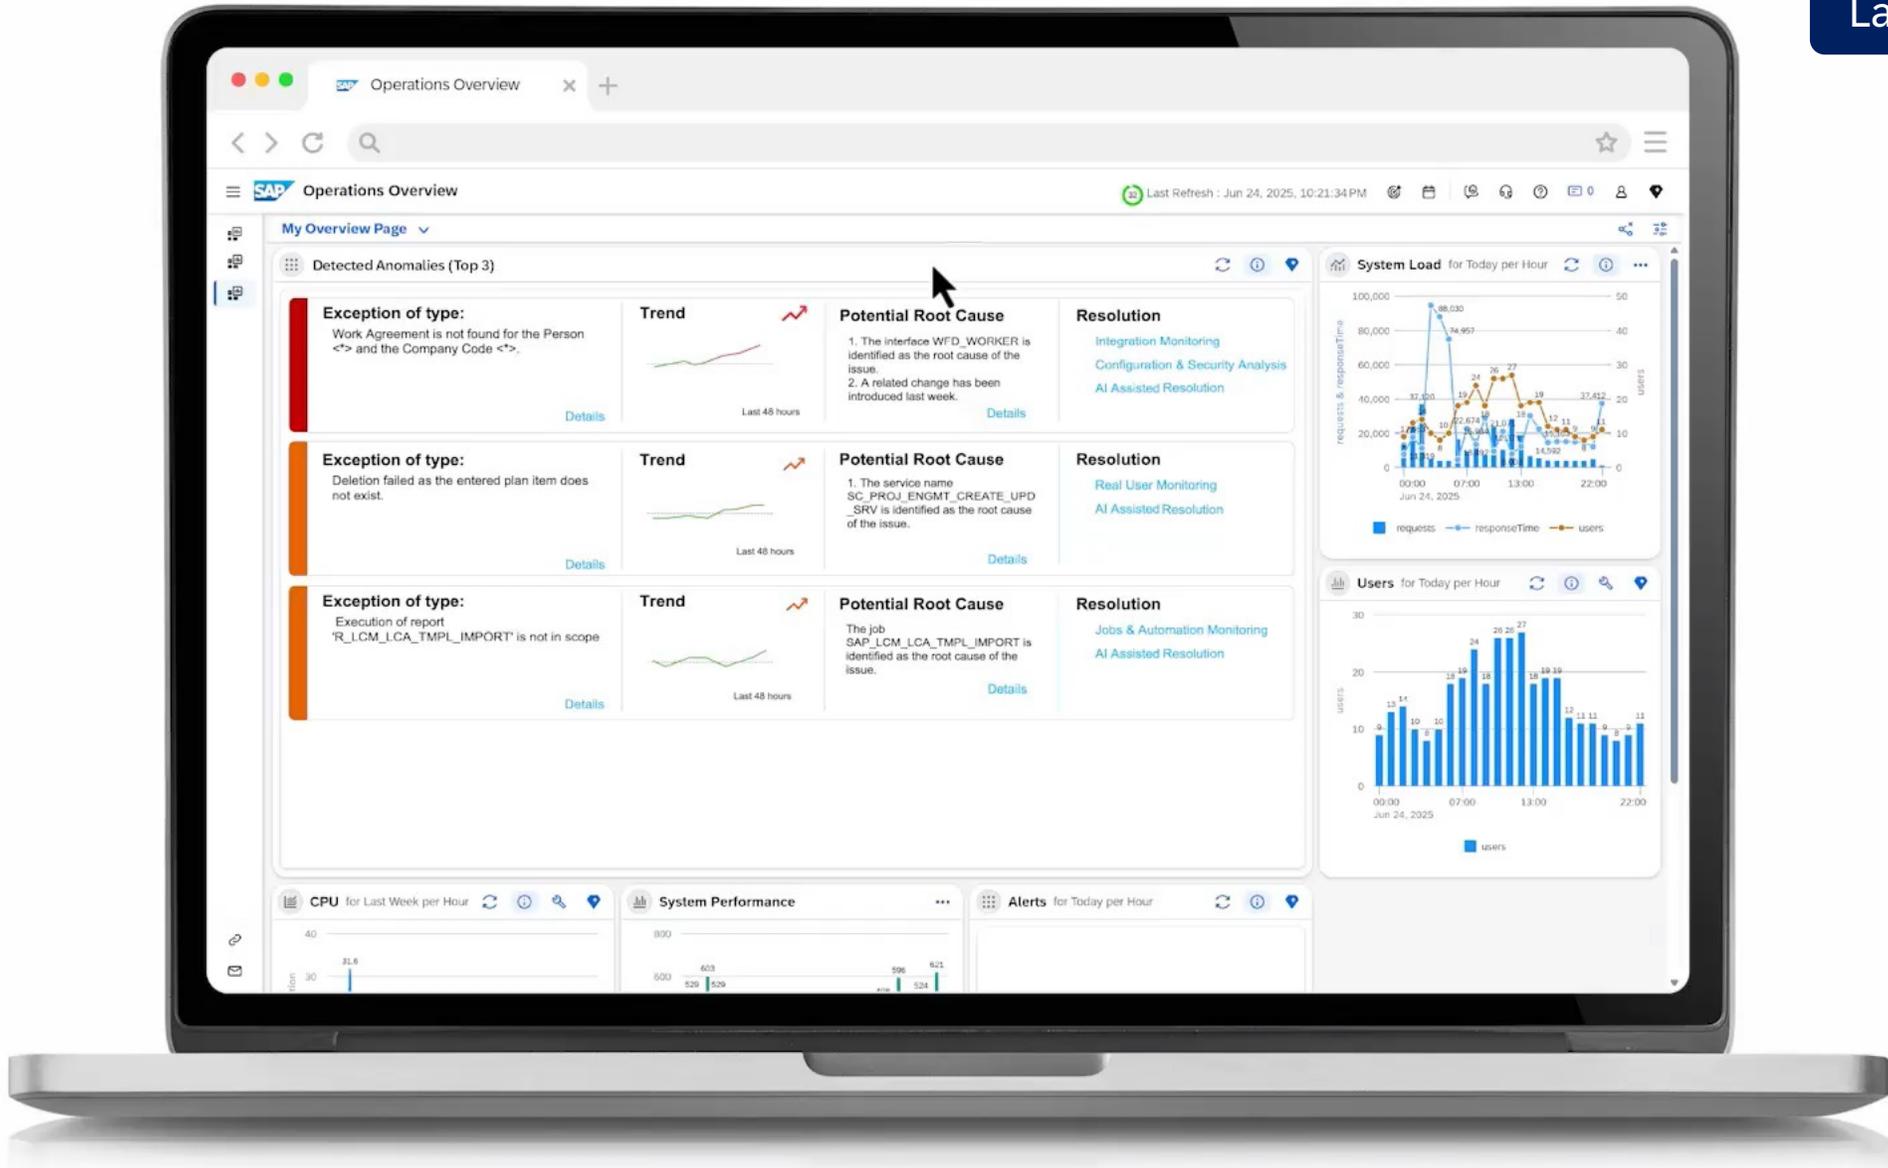

Use Joule and Agentic AI in SAP Cloud ALM to accelerate alert investigation and resolution. AI automatically analyses the alert context, correlates symptoms across systems, checks recent changes, and proposes likely root causes. It can suggest next best actions, generate remediation steps, and provide relevant documentation - all directly within the alert workflow. This helps Sonia resolve issues dramatically faster, reduce manual analysis effort, and build consistency across operations teams.

Benefits

Up to 60%
reduction in alert investigation time

Consistent, guided troubleshooting
through AI-generated insights

Better knowledge retention
as AI captures and applies past learnings

AI-assisted Custom Dashboard

AI-assisted project KPI visualization

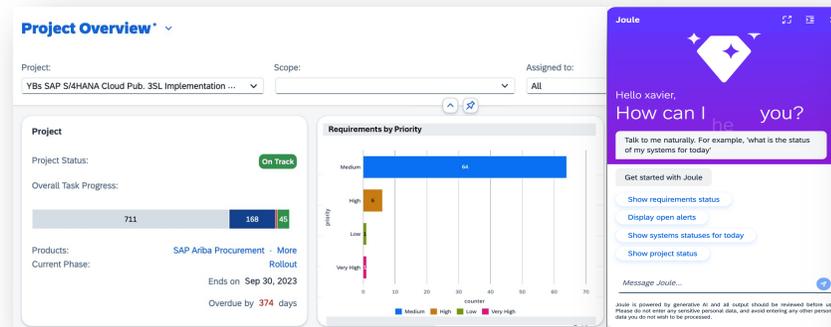

Goals

Alex
Project Team Member

I need flexibility with Joule subscription, so that the charts/KPIs can be tailored to display data that is most relevant to the specific project, such as migration progress, testing results, or other metrics not captured in the standard reporting apps.

Solution

Enhance the SAP Cloud ALM Overview page by providing a customizable card placeholder feature that allows users to create and edit custom KPI charts using Joule.

Benefits

40%
Improvement in project tracking efficiency

30%
Reduction in time spent on manual report generation

Enhanced
decision-making with real-time, project-specific insights

A laptop is shown from a front-facing perspective, slightly angled. The screen is dark, and a central text box with a thin purple border is displayed. The text inside the box reads "AI-Assisted Custom Dashboard" in a large, white, sans-serif font, with "(Create Custom Cards on Project Overview Page)" in a smaller, white, sans-serif font below it.

AI-Assisted Custom Dashboard
(Create Custom Cards on Project Overview Page)

Transitioning from Solution Manager to SAP Cloud ALM

From SAP Solution Manager to SAP Cloud ALM

All SAP Solution Manager customers should plan to move to SAP Cloud ALM.

Adopt SAP Cloud ALM for service and operations **NOW**

- Less customer effort for updates
- Ease of use and consumption
- Simplified monitoring without agents
- Additional monitoring use cases
- SAP service delivery integrated

Use SAP Cloud ALM for cloud projects **NOW**

Adopt SAP Cloud ALM for implementation **at your own pace**

- Complete your move to SAP S/4HANA
- More functionality for Testing, Deployment Management and Solution Documentation is planned for 2025
- Advanced functionality for Deployment Management and Solution Documentation planned for later

Guidance and Support for the Transition to SAP Cloud ALM

SAP supports you with

- Readiness Check for SAP Cloud ALM
- Transition methodology to SAP Cloud ALM
- Roadmap and Implementation Services
- Tools for selected data transfer of solution documentation and test cases*
- APIs for data transfer and 3rd-party integration
- Guidance for typical customer situations
- All you need to know in the [Transition Center](#)

Transition to SAP Cloud ALM for Implementation

Transition to SAP Cloud ALM for implementation when the available functionality fulfills your needs, or if you plan to implement SAP's cloud solutions within your landscape.

Functional comparison and transition guidance

- > Process Management
- ▼ Project Management
 - Functional comparison: Project Management**

SAP Solution Manager	Project Management
Optional usage for ALM processes Based on the project management functions of SAP Portfolio and Project Management (SAP PPM)	Limited SAP Activate content Loose integration into other ALM functions (ChaRM, SolDoc, Focused Build)

 - Transition Guidance**

Transition to SAP Cloud ALM: Guidance for typical customer situations

Find typical customer situations and guidance for the transition to SAP Cloud ALM.

- > Your current focus: On-premise
- > Implementing SAP S/4HANA Cloud
- > Extensive Solution Documentation / Test Suite & Test Automation footprint
- > Change Request Management in use
- > On-premise focus beyond 2027
- > Long-term operations of non-ABAP / non-HANA products beyond 2027
- > Using non-SAP / 3rd party ALM solutions

Project Management is provided in SAP Solution Manager and SAP Cloud ALM.
From a data transfer perspective, you can manually export Work Breakdown Structures (WBS) from S/4 is not supported.
SAP recommends to finish running projects in SAP Solution Manager and start new projects in SAP Cloud ALM.

• Use your transition to SAP Cloud ALM to rethink and simplify your ALM processes

31. 12. 2027

**SAP Solution Manager
End of Mainstream Maintenance**

What does that mean?

SAP Solution Manager will leave its Mainstream Maintenance on December 31, 2027.

What does that mean (starting January 1, 2028)?

- No delivery of Support Packages
- No guarantee for technological updates (like new kernel versions for the support of new database versions and operating system versions)
- No new patches for non-ABAP components (for example, Java patches or front-end patches)
- No support of new interfaces
- No guaranteed SLAs
- Processing of problems is customer-specific

Detailed information can be found in SAP Notes [52505](#) and [3255311](#).

What should you do NOW?

**Start your transition to
SAP Cloud ALM!**

But what are the benefits of SAP Cloud ALM?

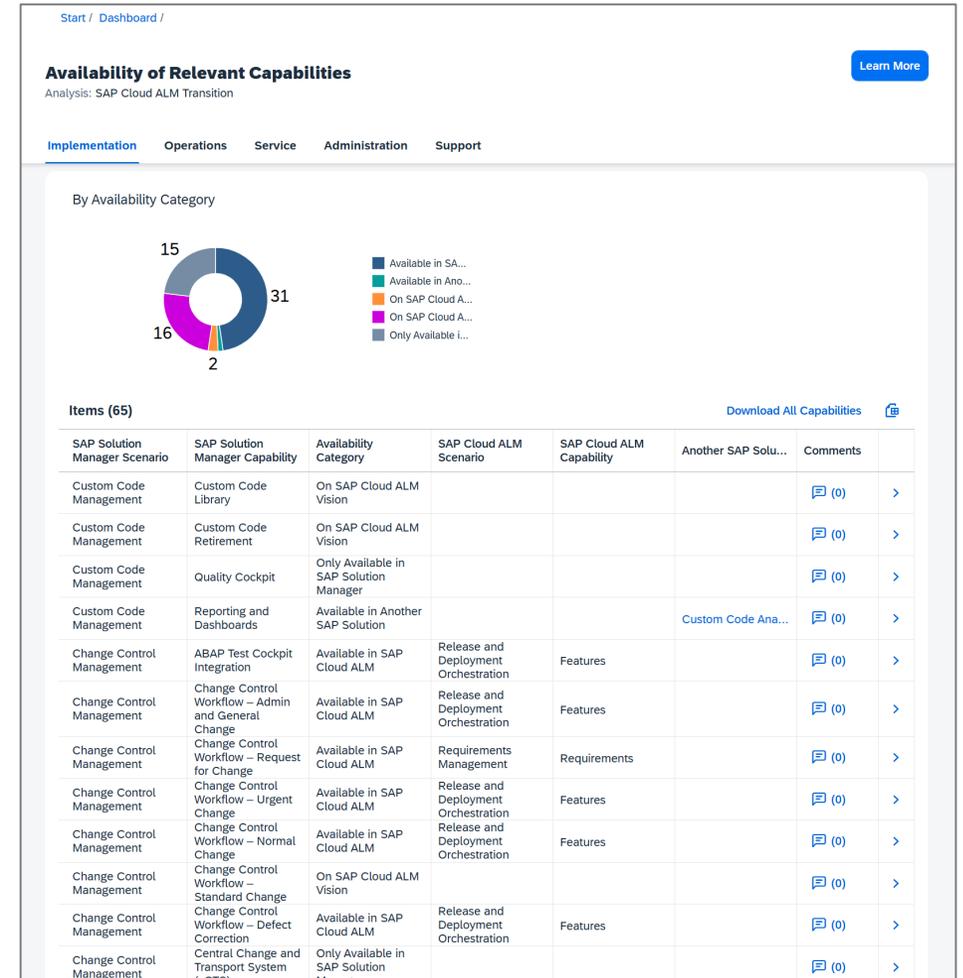

- Modern SaaS-based ALM solution for today and tomorrow
- Lower TCO compared to SAP Solution Manager
→ no patches or SPs, run for you by SAP
- Modern and flexible UI
- Functional scope way beyond SAP Solution Manager in many scenarios
- AI use cases only available in SAP Cloud ALM
- Easy to set up and quick onboarding of users
- Attractive for many customers who find SAP Solution Manager too complex to handle

What do you need to do now?

- Run the Readiness Check on SAP Solution Manager to understand what you are using
- Request your SAP Cloud ALM tenant
- Use the tenant to learn about SAP Cloud ALM, add trainings and learnings etc.
- Make a plan based on the results, consult Activate Methodology for project plan
 - Do you need to transfer data? Evaluate Selective Data Transfer (SDT)
 - Are you using ChaRM? Add dedicated analysis to your planning

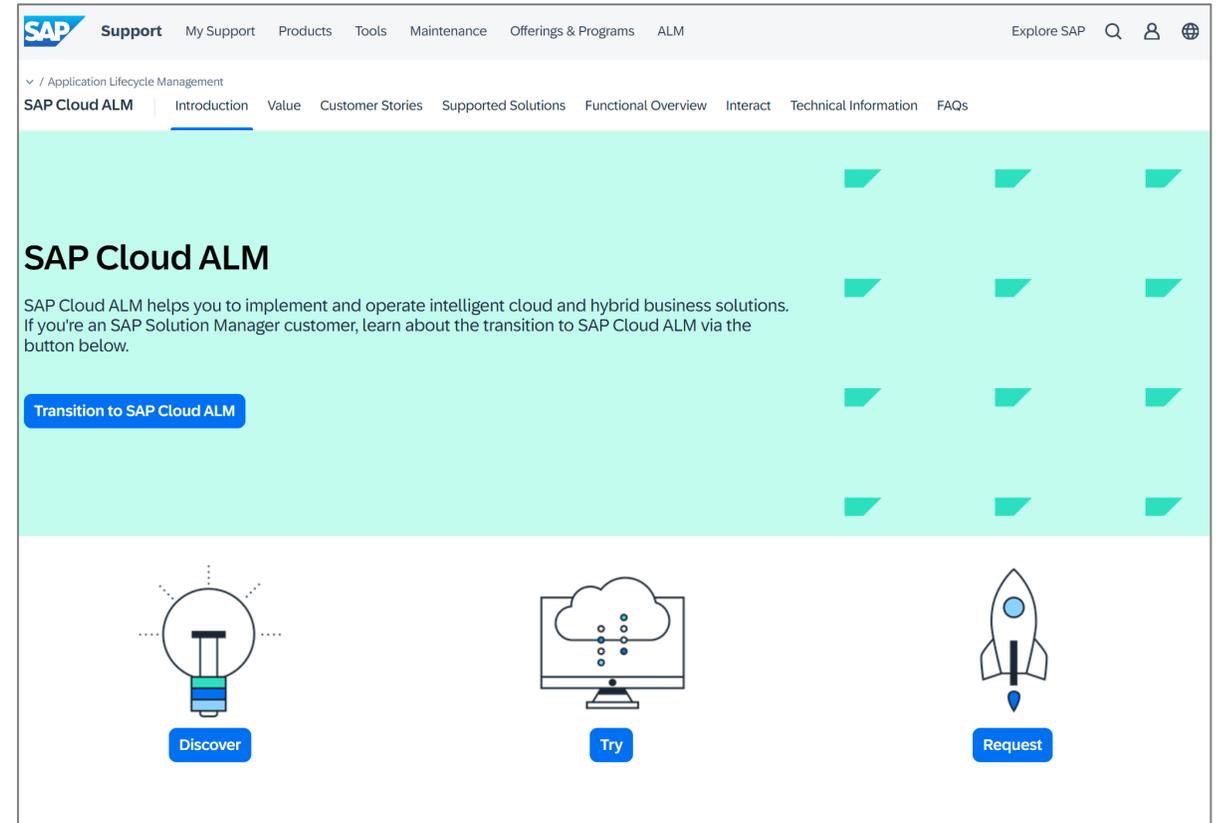

Run the Readiness Check on SAP Solution Manager to understand what you are using

Execute the [SAP Readiness Check for SAP Cloud ALM](#) on your SAP Solution Manager system to understand what you are using and where the functionality will be provided in SAP Cloud ALM (or somewhere else).

Request your SAP Cloud ALM tenant

Request your SAP Cloud ALM tenant via [SAP for Me](#).

Use the tenant to learn about SAP Cloud ALM, add trainings and learnings

Use your SAP Cloud ALM tenant to learn and understand the product.

Add learnings from the [SAP Cloud ALM Learning Portal](#) to your learning journey.

The screenshot shows the SAP Cloud ALM Learning Portal interface. At the top, there is a navigation bar with the SAP logo and 'Support' text. Below this, a breadcrumb trail reads 'Application Lifecycle Management / SAP Cloud ALM'. The main navigation menu includes 'Learning Portal' (which is highlighted), 'Introduction', 'Featured Learning Offering', 'Learning Journeys', 'Solution-Specific Learning', and 'Additional Resources'. The main content area has a teal background and features the heading 'SAP Cloud ALM learning portal' with a sub-heading 'Your one-stop destination for all your educational needs.' Below this, a paragraph states: 'We offer a comprehensive learning experience designed to empower you to acquire new knowledge and enhance your skills.' A bulleted list follows: 'Featured learning offering: Regularly updated and vary based on the most popular, relevant, or recently launched learning opportunities.', 'SAP Cloud ALM learning journeys: Build the skills you need at your own pace.', and 'Additional learning resources: Cover various SAP products and methodologies supported by SAP Cloud ALM, providing you with valuable how-to and deep-dive learning resources as well as continuous learning opportunities with events and other channels.' At the bottom, there are three columns of content: 'New SAP Cloud ALM customers' with a 'Welcome Session' button and 'Bi-weekly, local language support'; 'SAP Cloud ALM newcomers' with a 'Discover Webinar' button and 'Monthly, local language support'; and 'Consultants seeking advanced expertise' with a 'Deep-dive Series' button and 'High-frequency, ad-hoc for strategic topics'.

SAP Support

Application Lifecycle Management / SAP Cloud ALM

Learning Portal | Introduction | Featured Learning Offering | Learning Journeys | Solution-Specific Learning | Additional Resources

SAP Cloud ALM learning portal

Your one-stop destination for all your educational needs.

We offer a comprehensive learning experience designed to empower you to acquire new knowledge and enhance your skills.

- **Featured learning offering:** Regularly updated and vary based on the most popular, relevant, or recently launched learning opportunities.
- **SAP Cloud ALM learning journeys:** Build the skills you need at your own pace.
- **Additional learning resources:** Cover various SAP products and methodologies supported by SAP Cloud ALM, providing you with valuable how-to and deep-dive learning resources as well as continuous learning opportunities with events and other channels.

New SAP Cloud ALM customers

[Discover Webinar](#)
Monthly, local language support

Consultants seeking advanced expertise
[Deep-dive Series](#)
High-frequency, ad-hoc for strategic topics

“Special Question” 1: Do you need to transfer Solution Documentation data?

If you have built up solution documentation in SAP Solution Manager, you might want to move it to SAP Cloud ALM.

For this, SAP provides the [selective data transfer \(SDT\)](#) tool.

If you need guidance, there is an [Expert Guided Implementation \(EGI\) service for transition](#) to support you.

▼ / SAP Cloud ALM / Transition to SAP Cloud ALM
Selective Data Transfer from SAP Solution Manager to SAP Cloud...

Selective Data Transfer (SDT)

Move your solution documentation from SAP Solution Manager to SAP Cloud ALM.

Scope Analysis for Selective Data Transfer

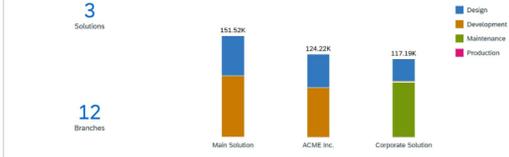

Overview

Number of changes by Solution and Branch in the last:

6 Months 12 Months

3 Solutions

12 Branches

Solution	6 Months	12 Months
Main Solution	151,52K	151,52K
ACME INC.	124,22K	124,22K
Corporate Solution	117,19K	117,19K

Legend: Design (blue), Development (orange), Maintenance (green), Production (red)

The primary goal of the selective data transfer (SDT) is to ensure a seamless transition of solution documentation from SAP Solution Manager to SAP Cloud ALM. In general, the following steps need to be performed for a successful migration of data:

- **Scope:** Select and scope the data in SAP Solution Manager that should be migrated to SAP Cloud ALM
- **Export:** Download the selected data.
- **Adjust:** Adjust the data, if necessary (this is an optional step).
- **Import:** Upload data to SAP Cloud ALM
- **Validate:** Verify the uploaded data in SAP Cloud ALM for correctness

Use this [overview presentation](#) for a walk-through of the selective data transfer from SAP Solution Manager to SAP Cloud ALM. Also, the [SAP Readiness Check for SAP Cloud ALM](#) provides valuable information to prepare the selective data transfer.

“Special Question” 2: Do you use Change Request Management (ChaRM)?

If you are using Change Request Management in SAP Solution Manager, the transition depends on your actual footprint.

See the Readiness Check for ChaRM-relevant information regarding your transition planning.

In addition, please see the [ChaRM Transition Whitepaper](#) for details and transition scenarios.

Guidance for Transitioning from SAP Solution Manager Change Request Management to SAP Cloud ALM Change & Deployment Management

This document provides guidance for customers transitioning from Change Request Management (ChaRM) in SAP Solution Manager to SAP Cloud ALM. The transition approach varies based on customer size and complexity. Key considerations include:

Limited Customization

- SAP Cloud ALM offers less customization than SAP Solution Manager, particularly regarding the Post Processing Framework (PPF).
- Leverage available APIs (see Roadmap Explorer and Business API Hub) to adapt workflows. Workflows can be extended through utilizing external workflow engines like SAP Build Process Automation – Workflow Management.

Simplified Transaction Types

- SAP Cloud ALM's transaction type concept is less extensive than ChaRM's. Analyze your current usage and assess whether the current Feature workflow in SAP Cloud ALM suffice your needs. If that's not the case the option to extend the workflow through APIs mentioned above could be an option.

The diagram illustrates the SAP Cloud ALM workflow process. It begins with 'In Specification' (Technical specification of a feature to be done) and 'Start Implementation'. From 'Start Implementation', the process moves to 'In Implementation' (Implementing the feature covers recording of changes (assign transports) and deploying changes to the test stage). From 'In Implementation', it branches to 'Not Planned?' (To indicate that a feature is postponed) and 'Handover to Test'. 'Handover to Test' leads to 'In Testing' (Feature is ready to be tested). From 'In Testing', it branches to 'Not Planned' (To indicate that a feature is postponed) and 'Custom Testing'. 'Custom Testing' leads to 'Successfully Tested' (Indicates that the changes were successfully tested). From 'Successfully Tested', it branches to 'Not Planned' (To indicate that a feature is postponed) and 'Approve for Production'. 'Approve for Production' leads to 'Ready for Production' (Indicates that the changes are ready for production deployment). From 'Ready for Production', it branches to 'Not Planned' (To indicate that a feature is postponed) and 'Custom Deployment'. 'Custom Deployment' leads to 'Deploy' (Confirming the deployment of the changes to production).

More “special cases”...

- Are you using **Focused Build** in SAP Solution Manager?
 - Similar functionality is planned in SAP Cloud ALM, mostly planned to be available by end of Q4/2025.

- Are you in a **regulated environment**?
 - Please see the [special information for regulated customers](#) for details.

- Are you using “**non-ALM**” **functionality** on top of SAP Solution Manager (LAW, CUA, SLD, System Recommendations, etc.)?
 - Please see the [Transition Center](#) for details.

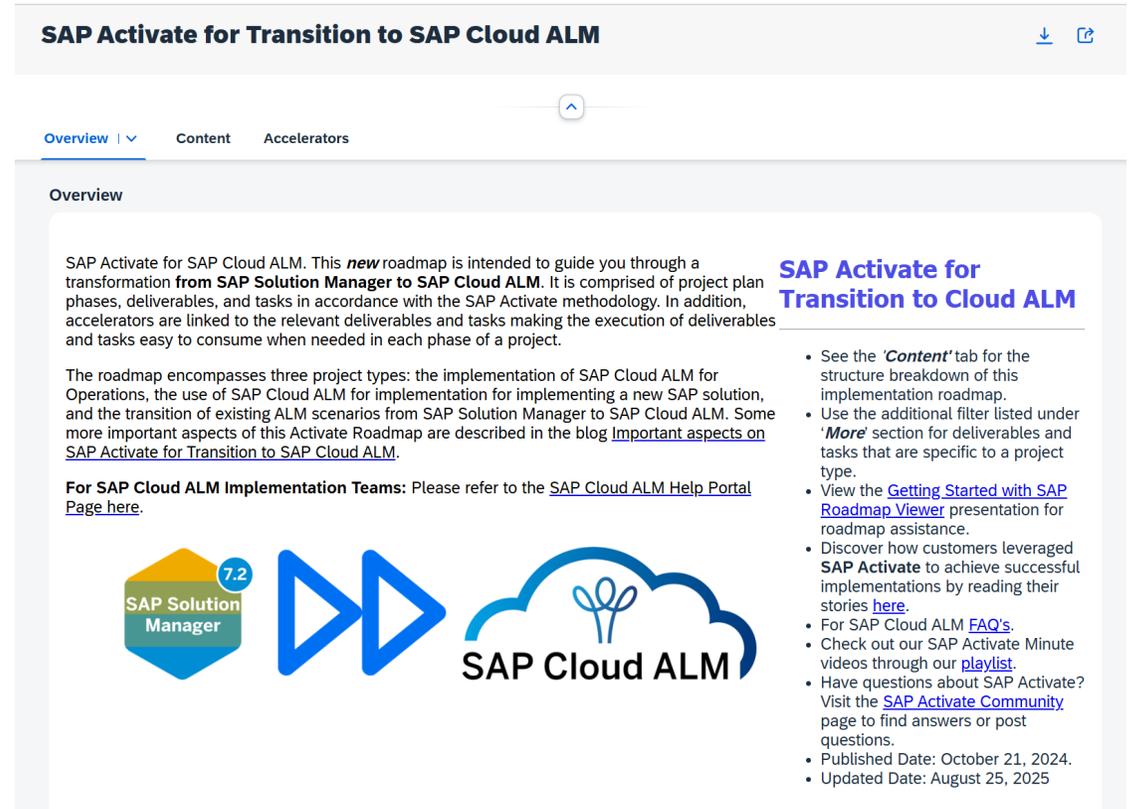

Make a plan based on the results, consult the SAP Activate Methodology for project planning

Plan your transition based on the results of the Readiness Check.

Move your scenarios one by one, start with operations use cases.

For best practices, consult the SAP Activate Methodology roadmap “[Transition to SAP Cloud ALM](#)”.

Pro tip: You can use SAP Cloud ALM as the project management tool for your transition from SAP Solution Manager!

SAP Activate for Transition to SAP Cloud ALM

Overview | Content | Accelerators

Overview

SAP Activate for SAP Cloud ALM. This *new* roadmap is intended to guide you through a transformation **from SAP Solution Manager to SAP Cloud ALM**. It is comprised of project plan phases, deliverables, and tasks in accordance with the SAP Activate methodology. In addition, accelerators are linked to the relevant deliverables and tasks making the execution of deliverables and tasks easy to consume when needed in each phase of a project.

The roadmap encompasses three project types: the implementation of SAP Cloud ALM for Operations, the use of SAP Cloud ALM for implementation for implementing a new SAP solution, and the transition of existing ALM scenarios from SAP Solution Manager to SAP Cloud ALM. Some more important aspects of this Activate Roadmap are described in the blog [Important aspects on SAP Activate for Transition to SAP Cloud ALM](#).

For SAP Cloud ALM Implementation Teams: Please refer to the [SAP Cloud ALM Help Portal Page here](#).

SAP Activate for Transition to Cloud ALM

- See the '**Content**' tab for the structure breakdown of this implementation roadmap.
- Use the additional filter listed under '**More**' section for deliverables and tasks that are specific to a project type.
- View the [Getting Started with SAP Roadmap Viewer](#) presentation for roadmap assistance.
- Discover how customers leveraged **SAP Activate** to achieve successful implementations by reading their stories [here](#).
- For SAP Cloud ALM [FAQ's](#).

Solution Transformation Consultant Training Program

Who should attend

- Solution Transformation Consultants are responsible for orchestrating the activities from design to deploy throughout the business transformation journey using an end-to-end tool chain. They have a key role in accelerating the transformation project by leveraging best practices and ensuring the highest quality of business transformation.

What is this training about

- This is a comprehensive training where Solution Transformation Consultants will understand SAP's business transformation strategy, gain hands-on experience with SAP Cloud ALM and the integrated toolchain, and learn its role in the RISE with SAP methodology.

How could you get trained

- SAP Learning Journey: [Transforming for Success: Solution Transformation with SAP Cloud ALM](#)
- Attend ALM events for latest updates

What do you get

- **SAP Knowledge Badge of “Solution Transformation Consultant”** if you pass the test during ALM events, with always up-to-dated content catering to beginner-level participants.
- The badge for 2025 is valid till the mid of 2026.
- **SAP Certification of “Solution Transformation Consultant with SAP Cloud ALM”** if you challenge yourself through certificate test from [SAP Learning](#) when you have intermediate level knowledge.
- **Renew your badge next year or get certified as a Solution Transformation Consultant!**

SAP Cloud ALM - Service offerings

SAP Consulting Services

- The Agile SAP Cloud ALM Coach is your pathfinder and guidance that ensures a manageable and successful transformation journey and a smooth business operation without disruption with SAP Cloud ALM.
- Please contact alm.consulting@sap.com for more information.

Missions in the SAP Discovery Center

Missions include best practices and step-by-step guidance for implementing use cases, with a well-established support from mission experts and SAP Community. The missions covering SAP Cloud ALM are available in the [SAP Discover Center](#).

[Expert Guided Implementation](#)

- An Expert-Guided Implementation (EGI) is a multi-day remote session delivered in a one-to-many format. During the morning, the trainer presents the content and in the afternoon they provide hands-on activities (homework) to be executed in the customer's own landscape.

Design Discovery & Configuration Solution Launch Check (for Preferred Success Engagements)

- These services are available for customers with a SAP Preferred Success engagement.
 - It enables you to realize the value of SAP Cloud ALM through operational readiness for Integration Monitoring, Business Process Monitoring, Job Monitoring and other capabilities.
 - It reviews your existing SAP Cloud solutions landscape and provides hands-on configuration sessions for Integration Monitoring, Business Process Monitoring, Job Monitoring and other capabilities.
- Please contact your SAP Customer Success Manager (CSM) to schedule your service. You can find your responsible CSM [here](#).

SAP Cloud ALM Roadmap (what is planned for future?)

The screenshot displays the SAP Road Map Explorer interface. At the top, there is a navigation bar with the SAP logo, 'Road Map Explorer', and links for 'Products', 'Processes', and 'Industries'. On the right side of the navigation bar, there are icons for 'My Road Maps', a list icon, an envelope icon, and a user profile icon.

Below the navigation bar is a search bar with the text 'Search SAP Road Map by keyword, product, industry or process' and a magnifying glass icon. To the right of the search bar, it indicates '57 Road Map Items'. Below the search bar, there is a filter for 'SAP Cloud ALM' with a 'Clear all' option. There are also dropdown menus for 'Products' (showing 1 item) and 'Focus Topics'.

On the right side of the main content area, there is a 'Date Range' selector set to 'Current - Latest', and buttons for 'Download', 'Share', and 'Save'.

The main content area is divided into four columns representing quarters: Q1 2025 (24 items), Q2 2025 (16 items), Q3 2025 (8 items), and Q4 2025 (4 items). Each column has a 'Collapse All' button. The items are categorized into 'Business and Data Transformation' and 'Solution Implementation'.

Q1 2025 (24 items):

- Business and Data Transformation
- Solution Implementation
 - FUTURE RELEASE: Additional authorization roles for change and deployment management
 - FUTURE RELEASE: Data transfer from SAP Solution Manager
 - FUTURE RELEASE: Deployment scheduler for transports
 - FUTURE RELEASE

Q2 2025 (16 items):

- Solution Implementation
- Solution Operation
 - FUTURE RELEASE: Authorizations at the landscape object level in exception monitoring
 - FUTURE RELEASE: Customer-defined KPIs in business process monitoring for ABAP-based...
- Solution Service Delivery
 - FUTURE RELEASE: Self-service capabilities for customers

Q3 2025 (8 items):

- Solution Implementation
 - FUTURE RELEASE: ABAP Test Cockpit checks integration
 - FUTURE RELEASE: Additional user roles on the feature user interface
 - FUTURE RELEASE: Document Templates
 - FUTURE RELEASE: Enhanced document deletion

Q4 2025 (4 items):

- Business and Data Transformation
 - FUTURE RELEASE: Patterning for account to ledger
- Solution Implementation
 - FUTURE RELEASE: Document-based test cases
 - FUTURE RELEASE: Mass editing of test cases
 - FUTURE RELEASE
